Introduction

The Introduction gives you the overview, objective, goes over the game components, notation used, and preparing for your first game.

Overview

Legacy of Celestria is a cooperative dungeon-crawling, narrative driven, tabletop adventure for 1-4 players ages 14+, offering an engaging and immersive experience from 1 hour to a hundred hours.

Embark on an epic adventure in the world of Celestria. Explore a dynamic world, uncover hidden labyrinths, and engage in roll'n match, strategic dice-driven combat. Battle powerful overlords, experience deep character progression, and make choices that truly matter. Gather your party and forge your destiny in this unique tabletop journey.

Objective

The goal of Legacy of Celestia varies slightly depending on your chosen mode of play:

In the Legacy Campaign: Your goal is to survive a 100-hour journey across Celestria. You must systematically confront and defeat the Five Overlords (such as Gorr'Ravok and Morigrim) to halt the spread of Corruption. The game is won when you purify all the Guardians, defeat the Overlords, and restore light to the realm.

In the One-Shot Scenario: Your goal is to complete a specific Scenario Objective. Whether it is rescuing a captured Courier, retrieving a relic from a sunken grotto, or slaying a local foe, the game is won when the specific victory conditions of your scenario is achieved.

24x Loot Punchouts

24x Barrier Punchouts

The Archive

A Living Database

Legacy of Celestria does not use a digital app to track your progress. Instead, the game's state is contained within Index Boxes. Every choice you make, every bridge you burn, and every ally you gain is recorded by the physical movement of cards between different sections of these boxes.

As a player, you are the Database Operator. When the game tells you to find a card, you are accessing a specific moment in Celestria's state.

Alphda-Numeric Ids

Every card and just about every component in the game is assigned a unique identifier, for example, NPC-004.

The Deck is usually a 3-letter acronym represting the type of index the card comes from. For example: LOC is the acronym for Locations, and ACT is for Combat Actions.

The index of a card is a 3-digit number. It represents a unique entity within the world. For example, NPC-001 refers to Melody, NPC-6 refers to Bobby Filet.

The Version is a letter suffix, like A, B, or C. Version A is usually the world as you find it, and subsequent versions represent the same entity after it has been altered by your journey.

Most cards have the alpha-numeric id on the back of the card, upside down. This way, it is more difficult to accidentally see specific spoilers.

Data State

To manage the state of the decks and indices, most decks are split by three physical dividers:

Inactive Archive: The Inn. These cards are waiting to be discovered. Never look through these cards unless specifically instructed.

Active Deck: Cards that are currently in play. These are the cards you will interact with during your current session.

Drawn Deck: Specifically for decks with discard piles, like the DAY and ACT cards. These have been pulled and resolved, acting as a discard pile that persists until the deck is refreshed.

Exchange Operation

The most vital operation you will perform is the . This is how the story branches. When an Event or Location tells you to:

 LOC-001A → B

You are physically replacing the old card with a new one, altering the world state. Remove Version A from the Active sector and retire it to the Inactive sector. Then, find Version B in the Inactive sector and without looking at it, move it to the Active sector. The world has now permanently changed.

If the card is currently Active and in the play area, then the card is exchanged from the index to the play area. This means you can interact with the card immediatly.

Preserving the Legend

The Archive is designed to be persistent. When you finish a session, you do not “reset” the boxes, this is the state of the world between sessions.

By keeping the Drawn and Active cards in their respective sections, the game “saves exactly where you left off.

The Silver Song of Lyratha

To the south, where the Aequeorea Spine finally tires of the open sea and curls into the rocky embrace of the Lyratha Peninsula, the air smells of salt and brine. This is the ancestral sanctuary of the Merfolk, a people whose history is woven with the rhythmic tradition of the tides.

The Peninsula is a jagged spine of basalt-gray stone, pink coral, and blue luminous crystal, half-submerged in the turquoise shallows and indigo deeps. Here, the veil between Iseria and the Heavens of Celestria is exceptionally thin. When the moon is full and the mists are high, the Merfolk enter the bay to perform the Choral of the Moon-Tide, a song to keep the gateways open and the moon ever changing in the sky. Each note is a vibration harmonizing with the Guardian of the Deep, a guardian of coral that ensures the ebb and flow of the tides and the cycle of the moon never stagnates.

Travelers in the Iseria report that the Lyratha tides have turned a sickly, bruised violet-black. The Merfolk elders whisper of a shadow moving beneath the shelf, of a vile evil seeking to still the waters. Brave heroes, like yourself, are their only hope!

Preparation

Core Engine

Booklets: Place the booklets along the side of the table, these will be passed from playerr to player during gameplay.

Threat & Corruption: Place the Threat Wheel where all players can see them..

Storefronts: Arrange the Item and Weapon Storefront

boxes along the top edge of the play area.

Day Deck: Retrieve DAY-001 through DAY-007 (or your current Active Day cards). Shuffle and place them near the Atlas.

ACT Deck: Based on your chosen difficulty, gather the required ACT cards (e.g., 001–009 for Medium), shuffle, and place them face-down near the Threat Wheel.

Other Components: Leave ample space for other game components when instructed to include them. These include Foe cards, maps, rooms for delves, etc.

Assign the Archives

Distribute the four Index Boxes. Each player is responsible for managing their archives during the game:

Player 1 (Cartographer): Locations (LOC), Map Cards (MAP), and Small Grids (SML).

Player 2 (Chronicler): NPCs, Key Cards (KEY), and

the Event Booklet.

Player 3 (Bestiary): Foes (FOE), AI (FAI), and the ACT/DAY decks.

Player 4 (Merchant): Items (ITM), Weapons (WPN), and the Puzzle Wheels.

Hero Integration

Each player retrieves their Hero Box and sets up their Tableau:

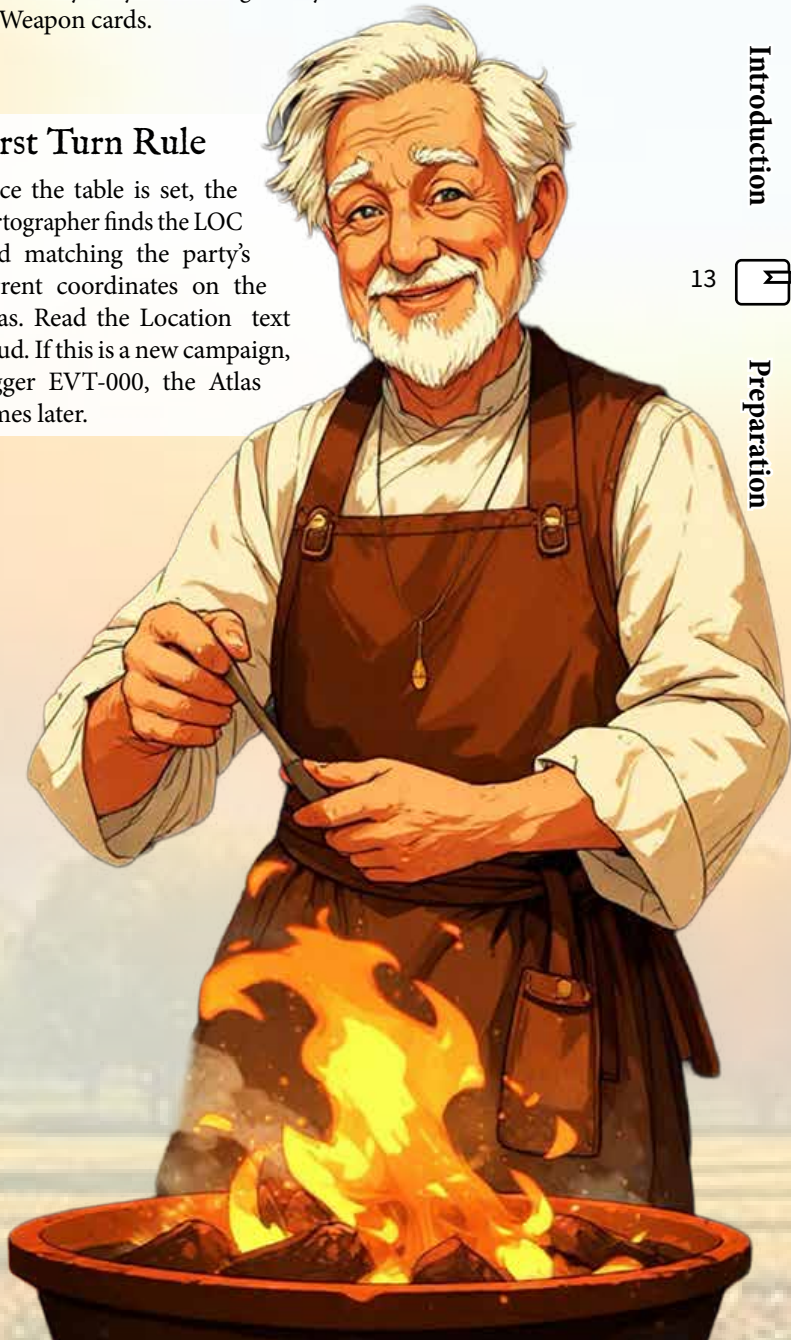

Attributes: Place 8mm cubes in the starting positions for Might, Wisdom, and Move.

The Max Token: Insert your physical Max Token into its current slot.

Loadout: Lay out your starting Ability and Weapon cards.

First Turn Rule

Once the table is set, the Cartographer finds the LOC card matching the party's current coordinates on the Atlas. Read the Location text aloud. If this is a new campaign, trigger EVT-000, the Atlas comes later.

World of Iseria

The World of Iseria section covers your first interaction with Celestria. It will cover the rules involving the Heroes, the Physics, and to explain the core game loop.

The Breath of the World

Suspended in the shimmering mists between the high radiance of Celestria and the absolute silence of the Void, our world acts as the lungs of the universe. It is a realm of in-between, where the stars themselves are in a constant state of flux where creation collides with destruction and existence dances with emptiness. To walk in Iseria is to walk upon a living organism that must breathe to survive.

This breathing is moderated by the Temples of the Labyrintheon. These are gateways, vast celestial valves designed to channel the raw magical energies of the heavens into our soil. Within each temple resides a Guardian—a demi-god embodying the pure magic from its domain. Whether it is the whispering spirit of the Aequorea Spine or the roaring titan of the Fierelian Mountains Range, these entities ensure that the elements of Life, Time, Dreams, and Air flow through the world in a harmonious cycle.

The breath of Iseria is hitching.

The Overlords, denizens of the deep Void, have begun a campaign of spiritual suffocation. By corrupting the Guardians, these demon-kind seal the gateways of magical energy. A corrupted Guardian of Water ends the rain, depletes the rivers, and aquifer. The demons may even redirect the flow into the darkness or simply seals it off, leaving the land to wither.

This is why you have been called. You are the harmonics in a world losing its tune. On your journey, you will find that music is the resonance of creation itself, the key to unlocking the puzzles of the Labyrintheon and in purifying the Guardians.

As you move across Iseria, remember: the ground beneath your feet is the skin of the world. Every location you discover is a potential waypoint for the light, and every dungeon you delve is a chance to heal the body of the world.

The labyrinths are calling. The Overlords are meddling. Iseria is waiting for its next breath.

Heroes of Celestria

Your Hero is a living force that ebbs and flows with the tide of battle. Your Hero Tableau tracks your current physical and mental state.

Your Peak Potential

The Max Token is a marker that sits in the groove of your Might and Wisdom tracks. It represents your Hero's permanent training and mastery.

Under normal circumstances, your Attribute Cubes cannot move further right than the Max Token. To push past this limit, you must find powerful Artifacts or trigger a Bloom effects.

As you gain Progression through the story, you will be instructed to move the Max Token itself to the right,

permanently increasing your capability and adding more dice to your dice pool.

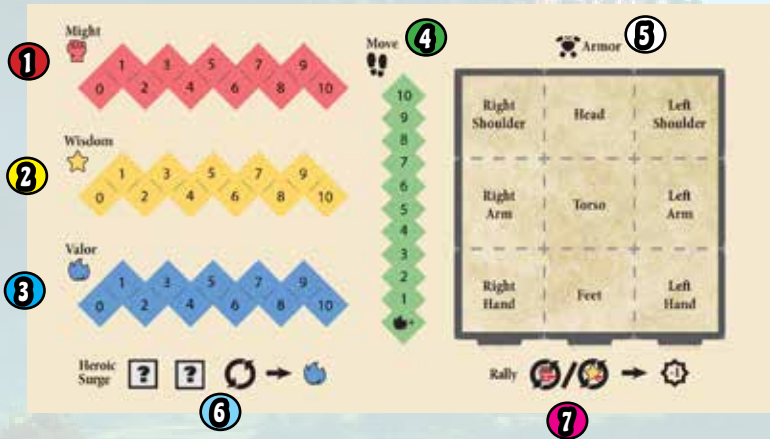

Wither & Bloom

Your Attribute Cubes move along their tracks based on the circumstances of your journey:

Wither: When you are wounded or exhausted, your Cubes moves to the left. If either of your Might or Wisdom attributes reach zero, you must rest.

Bloom: Armor, items, abilities, and rest allow your Cubes to move to the right. This can increase your attribute above your Max Token.

Unless otherwise stated, attributes reset to their max position whenever you rest.

Hero Tableau

- 1 Might (Red):** Your physical strength and endurance. High Might allows you to fully wield weapons and offensive abilities. Might determines the number of d6s you roll in your dice pool.
- 2 Wisdom (Yellow):** Your tactical intellect and magical focus. Wisdom allows you to manipulate the battlefield and nudge the fate of your dice rolls. Wisdom determines the number of Fudge Dice you roll in your dice pool.
- 3 Valor (Blue):** Your momentum. Valor is the fuel for your most heroic feats, gained through assessing your surroundings in combat.
- 4 Move (Green):** Your speed. This determines how many spaces you can move on your turn.
- 5 Armor Grid:** You have a dedicated location to slot your armor. These come in 1x1 and 1x2 slot sizes, and are designated for specific body parts for wear. Some armor gives a bonus Attribute when undamaged.
- 6 Heroic Surge:** Your innate ability to recover Valor. By converting any 2 unused dice into +1 Valor. You may do this multiple times during your active turn as long as you have available dice.
- 7 Rally:** Your ability to spring-back into combat by withering your attributes. At the beginning of your turn, reduce your Might or Wisdom by 1 to remove 1 damage. You may repeat this as long as you have attributes to reduce.

Backpack & Loadout

Your Tableau also manages your physical gear.

Backpack: You may carry up to 5 Items (Potions, Keys, etc.) in your backpack. Any gear beyond this must be stored in your Hero Deck Box. Key Items do not count toward your backpack limit.

Active Loadout: You have dedicated slots for Armor, Weapons, and Abilities. Only assigned cards in these slots can be used in combat.

You can only have 2 weapons assigned to your loadout at any time. This is your primary and secondary weapon. You can assign dice in combat to your primary weapon. You can switch your secondary and primary weapons at the start of your turn.

The Warblade has a special ability allowing them to assign dice to both the primary and secondary weapons every turn, which is an exception to this rule.

You can only have a total of 8 abilities assigned to your loadout. This is comprised of 2 starter, 2 bronze, 2

silver, 1 gold, and 1 platinum tier abilities. You can still learn all your abilities, but can only have a subset assigned during combat.

Commute Rule

During Setup, you may freely unequip any weapons or abilities and swap them with cards from your Hero Deck Box. Once the first Combat Action card is drawn for combat, your loadout is locked until combat ends

Hero Identity

Your Hero Card defines your starting attributes, your role within the party, and your fundamental personality.

While the attributes on the front of the card are your starting points, they do not change physically on the card itself. Instead, your growth is tracked by moving the Max Token on your Hero Tableau. The Hero Card remains a constant reference—a reminder of who you were at the start of the journey.

Hero (HRO) Card

- 1 Name:** Name of the Hero. Each Hero has two identities.
- 2 Class:** Represented by both your class name and icon. Your class defines your tactical archetype. Whether a Vanguard or Sage, your class determines the types of abilities you may acquire and use during the game.
- 3 Portrait:** An image portraying the likeness of the Hero. The overall color theme matches your Hero Box, primary attribute, and dice.
- 4 Starting Attributes:** You begin with a specific set of starting Attributes: Might, Wisdom, and Valor. These are the values you use to set your Attribute Cubes and Max Tokens during table setup.
- 5 Hero Quote:** Your hero has a saying that represents their attitude and approach to life.
- 6 Narrative:** This is the context for your Hero's journey: where they are, the weapons they prefer, and their overall philosophy.

- 7 Hero Figure:** A Hero Figure Reference representing your hero. This figure is used while navigating the world.
- 8 Index:** The index your Hero's unique identifier, useful for tracking cards and game state in the archive.

Armor

Your armor is your primary defense against the physical and magical friction of Iseria. On your Hero Tableau, there is a grid where you don your armor. Armor are punchouts that come in two sizes: 1x1 and 1x2. The armor fits snug into the armor grid on your tableau.

Don your armor by matching the Equip Slot and place it into your armor grid. Some armor target multiple slots with dashed-borders, you may choose where to place the armor as long as it is in one of those slots.

Rally & Retreat

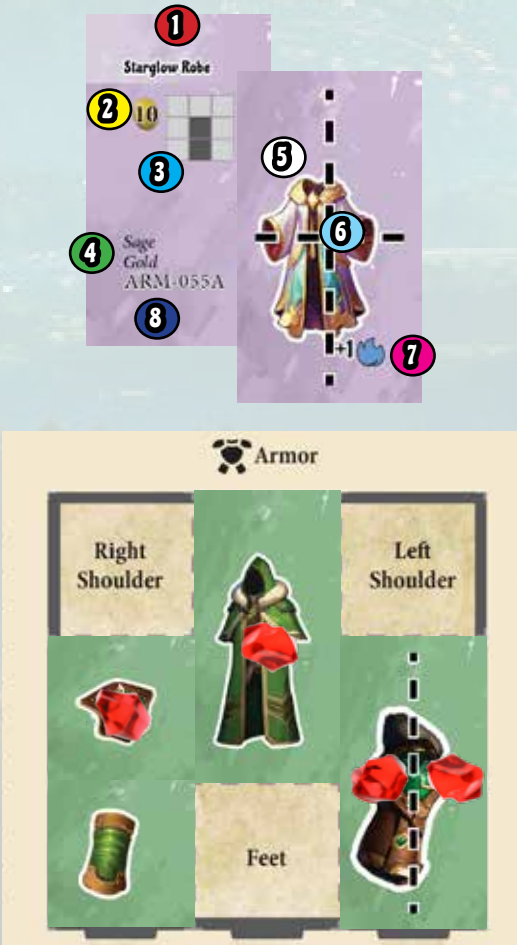

If all your armor has taken damage, then you must Rally on your next turn. To Rally, at the beginning of

your turn, reduce your Might or Wisdom by 1 to remove 1 damage. You may repeat this as long as you have attributes to reduce. When Rallying, you must wither at least half, rounding up, your attributes each time you Rally.

For example, if your Might is 8 and your Wisdom is 6, then you must wither a total of 7 attribute values. Since you want to avoid a 0 in any of your attributes, you may reduce Might by 3 and Wisdom by 4, leaving you with 5 Might and 2 Wisdom. This allows you to remove 7 damage of your choice from your armor. If you need to Rally again, then you must wither a total of 4, and for a third time, a total of 2, putting one of your attributes to zero forcing you to retreat.

Armor Token (ARM)

- 1 Name:** Name of the Armor. Within tiers, armor comes in sets, which the name reflects.
- 2 Price:** Price in gold coins to purchase the armor. Armor can be purchased at the Equipment Storefront, pay its cost and it is yours. You may sell armor for half, rounded up.
- 3 Equip Slot:** Denotes where to place the token on the Tableau's armor grid.
- 4 Class & Quality Tier:** Most armor can only be worn by the class specified. Armor is color-coded by tier, from Starter, to Bronze, Silver, Gold, and Platinum. Certain events will graduate you to the next tier.
- 5 Artwork:** Artwork of the armor. Armor within the same set have similar color tones.
- 6 Sub-Grid:** May sub-divide the armor grid, adding more resilience to your Hero. Some armor consume two spaces, others one. Armor may also sub-divide spaces into more spaces, increasing the amount of damage your Hero can handle.
- 7 Armor Bonus:** Some armor grants bonuses as long as the space containing the bonus is undamaged. For Attribute bonuses, increase or decrease your marker on your Hero Tableau to track it.
- 8 Index:** The index your Hero's unique identifier, useful for tracking cards and game state in the archive.

Weapons

Your Weapon is your primary means of attack in combat. Every Hero possesses two Weapon Slots, but only the Warblade can dual-weild them both at the same time.

Weapon Slots

- Primary:** You can assign dice in combat to your primary weapon.
- Secondary:** Your auxilery, sheathed weapon. You can switch your secondary and primary weapons at the start of your turn.

Weapon (WPN) Card

- 1 Name:** Name of the Weapon. Weapon types have common names related to the how the weapon strikes its target. For example: a warhammer will have a bashing attack pattern targeting one unit, while a Lance will have a pattern targeting two units and a linear attack pattern that pierces armor.
- 2 Keywords:** Any keywords describing the weapon. Keywords may be referenced by Foe Unique Mechanics, Modifiers, Events or Abilities, resulting in a unique effect.
- 3 Artwork:** Artwork showing the weapon.
- 4 Range & Type:** Weapon reach and type, melee or ranged . Range determines the number of spaces away the weapon can target. Type determines how targeting is resolved pertaining to the combat grid borders. For example, Melee weapons cannot target units beyond Impassable grids, but Ranged weapons can.
- 5 Hands:** Occasionally, your Hero may need to carry something that will consume a hand or two. Your Hero has two hands and can equip weapons as long as they have hands free. Despite having two hands and single-handed weapons, a Class must be proficient in attacking with both weapons.
- 6 Targeting:** Some weapons have a Target Grid indicating which targets will take damage based

on its alignment. The grid can be rotated to match orientation. If both the Target Grid and Range is supplied, the Target Grid takes precedence.

- 7 Attack Pattern:** Visual grid and dice combinations needed to damage a unit's HP-Grid. The pattern determines which of the target's HP-Grid nodes are attacked. For weapons, you only need to assign 1 die to its pattern to deal damage, but assigning more will deal more damage.
- 8 Special Effect:** Some weapons have effects to apply when the target gets hit, like push/pull, buff/debuffs, or environmental interactions.
- 9 Price:** Price in gold coins to purchase the weapon. Weapons can be purchased at the Equipment Storefront, pay its cost and it is yours. You may sell weapons for half, rounded up.
- 10 Narrative and Effect Rules:** Describes what happens when the weapon is used. Rules for using the weapon effect.
- 11 Class & Quality:** Most weapons can only be equipped by the class specified. Weapons are color-coded by tier, from Starter, to Bronze, Silver, Gold, and Platinum. Certain events will graduate you to the next tier.
- 12 Index:** Index of card.

Hero Abilities

Your Hero is a versatile force in Iseria. Your Loadout represents the specific gear and techniques you have prepared for the current day's journey.

You can only have a total of 8 abilities assigned to your loadout. This is comprised of 2 ⚙️ starter, 2 🥉 bronze, 2 🥈 silver, 1 🥇 gold, and 1 🏆 platinum tier abilities. You can still learn all your abilities, but can only have a subset assigned during combat.

In a Legacy campaign, you begin with only your Starter abilities. As the story unfolds, you will be instructed to 📁 higher-tier cards from your Hero Box. While your Pool can grow to 16 cards, you must always adhere to the Active Loadout limits of 8.

Heroic Surge

Valor is the fuel for your most powerful abilities. At any point during your turn, you may perform a Heroic Surge to generate Valor.

Choose any two unused dice in your pool (👊 Might or ★ Wisdom, regardless of value) and place them on the Heroic Surge area of your Tableau. You can repeat this as many times as you have pairs of dice to assign to Heroic Surge. Move your Valor Cube one space to the right (+1 Valor), up to your Max Token.

These dice are considered spent for the current turn. They remain in the Surge area until the beginning of your next turn, at which point they return to your active pool.

If an ability or item allows you to spend 1 Valor per die rolled, you may use the dice you just placed in the Heroic Surge area to fuel that specific attack immediately.

Mastering Your Focus

While every Hero begins with the same Starter pool, your journey through Iseria is uniquely yours. Each class is designed with two specialized builds that emphasize different tactics.

Don't feel locked into a single path and be free to hybridize! The 16-card pool is your laboratory. If you know an upcoming Instance features high-armor Foes, swap your loadout to prioritize Pierce and Shatter keywords.

Abilities

Hero Abilities represent the unique techniques, spells, and combat maneuvers that define each hero's class. Every ability offers a distinct way to shape the battlefield—striking foes, supporting allies,

repositioning, or unleashing powerful class-specific effects. By managing resources, and choosing the right ability for the moment, you create dynamic strategies that evolve throughout the adventure. Each Ability card clearly explains how it works, when it can be used, and what it costs, ensuring every hero is intuitive.

Ability (ABL) Card

- 1 Name:** Name of the Ability.
- 2 Attribute & Type:** Target attribute of the ability and its type. The Attribute Icon determines the primary Attribute Dice to use and theme of the ability. ★ Wisdom abilities are magical or strategic. 👊 Might abilities are physical and aggressive. 🕒 Valor abilities are mostly done in the moment and adjust your existing skillset. Its type determines when the ability can be used, like: during your turn, as a reaction, as part of movement, or in special circumstances.
- 3 Keywords:** Any keywords describing the weapon. Keywords may be referenced by Foe Unique Mechanics, Modifiers, Events or Abilities, resulting in a unique effect.
- 4 Activation Requirement:** What you must spend to use the ability. Spend dice by assigning them to the cost. Costs in Square boxes must have the entire cost paid for before using it; however, ⚙️ Damage boxes can be partially filled. Activation Cost with a lock icon means the ability has duration and any dice or markers placed cannot be returned until at the start of your next turn; when the cost is removed, the ability is no longer active.
- 5 Example Usage:** Shows an example of how to use the ability, as a reminder to the Rules.
- 6 Rules:** Exact steps you follow to perform it. It explains how to target, what happens when it hits, and any special conditions or effects.
- 7 Refresh:** Some abilities use limited-use 🕒 markers. 🔄 Refresh tells you when they return, like at the end of combat or when a trigger occurs.
- 8 Narrative:** Description of the Hero performing the ability.
- 9 Summary:** Brief summary of what the ability does.
- 10 Class:** Abilities can only be used by the specified class.
- 11 Tier:** Overall power, complexity, and level of mastery of the ability. Tiers progress from ⚙️ Starter to 🥉 Bronze, 🥈 Silver, 🥇 Gold, and 🏆 Platinum. Each Hero gains access to higher-tier abilities as they grow, letting you customize your style.
- 12 Index:** Identifier of the card.

Events

In Iseria, (!) Events (EVT) represent pivotable moments in the world. An Event might be a an encounter, a puzzle, or a scene that forever changes the course of your campaign.

Depending on the game mode you are playing, Events reference different booklets. For a Legacy Campaign, these are Events (EVT), and for a One-Shot Scenario, these are (ONE). The booklets may be different and have different names, but the rules are the same.

Most Events are triggered by a Location Card, a Day Card, NPC Card, or the Corruption Wheel. When an Event Id is referenced (e.g., EVT-004), the Active Player retrieves the Event Booklet, finds the corresponding entry and reads it aloud.

Event (EVT) Booklet

- 1 Name:** Name of the Event.
- 2 Type:** The type of the event instance. These can be Scene, Puzzle, Combat, and World, for example.
- 3 Artwork:** artwork showing the scene of the event.
- 4 Introduction and Narrative:** The introduction is a short synopsis or description of the event. The narrative is the event as it plays before you.
- 5 Actions Menu:** Actions that the Active Player can choose. These are usually observations, places, interactions, instructions, or branching results. The primary choices the player can choose are listed on the left and the nested choices, revealed

Storytelling

Many cards have Actions or Choices on their Menu. Locations and NPCs have cards with a Menu leading to thier corresponding booklets, and Events are simply the booklet.

The player in charge of their Archive, retrieves the card and gives it to the Active Player—the player who’s currently taking their turn.

The Active Player is responsible for making choices or acting first in the sequence. They read the front of the card, flip it, and show the other players the artwork as they read the narrative on the back. The options are easily visible to the Active Player, and they choose as many as they’d like, one at a time.

The player to the right of the Active Player is the Storyteller. For each choice the Active Player makes, the Storyteller references the corresponding entry matching the cards Index in the associated booklet and reads the narrative. This helps the Active Player not to spoil any plot.

Some interactions are nested within the booklet. Be sure to listen for audio cues like intonations or a repeat of the word after the narrative to discern them!

Persistent Echoes

The Event may tell you to perform operations, such as: a card version, or cards to/from decks, or components. These alter the world state.

through first choosing a choice before it, are listed on the right.

- 6 Response:** Narrative for choosing an option from the Choice Menu. Some responses have nested choices, shown in bold text, that becomes available after reading the response.
- 7 Nested Action:** A choice that only becomes available after reading a Response or satisfying the Responses requirements.
- 8 Index:** Cross-reference identifier to be used with cards, booklets, puzzles, or other events. The booklet has these on the outside of the page so flipping through the book minimizes spoilers.

The Atlas & Locations

The Atlas is a macroscopic grid where every square represents miles of travel through the world. During the World Phase, your party moves as a single unit, choose a Hero Figure to use on the Atlas. The Atlas are pages in the Locations Booklet representing a region.

The Atlas has coordinates of letters and numbers. Some cards or booklets may refer to a specific location as B4. This means to find the square where column B and row 4 intersect.

When you zoom in to a feature, the reference defines your surroundings. From the Atlas, these are usually Locations, and when the party enters this square, the Cartographer retrieves the corresponding Location Card and hands it to the Active Player.

Travel

Movement on the Atlas follows the standard grid rules, but with a focus on the passage of time. The party uses the Move value of the party member with the highest Move Attribute when travelling. While

a straight line might seem fastest, the Border costs of swamps (Difficult) or forests (Obscured) will often force you to take a winding road to save or manipulate your most precious resource: Days.

Days & Timekeeping

In Iseria, distance is measured in exhaustion. For every complete move action, or spaces the Party moves on the Atlas, one Day passes.

Immediately before moving the space after the last move, the Bestiary player draws the top card of the Active Day Deck. Resolve the Day by applying any weather effects, global modifiers, or events immediately.

Once resolved, the card is placed in a discard near the deck. When saving the game, the discard is placed in the Drawn Sector of the Day Index to keep your place.

Some cards trigger special events only if they are drawn on a specific Day (e.g., Waxing Crescent Moon triggers an (!) based on the ANS card).

Day (DAY) Card

- 1 Name:** The name of the card that describes the Day the Heroes are having.
- 2 Type:** The type of the card, like Weather, Mood, etc. which are persistent modifiers that affect all combat and travel (e.g., Stormy: Aerial Move -1).
- 3 Narrative:** Flavor text describing the Day the Party has. Sometimes there are instructions to follow.
- 4 Effect:** Effects, events, instructions (e.g., -1 , to EVT-009, or NPC-012A → B).
- 5 Index:** The index of the card. You can or DAY cards through your journey.

Locations

The Atlas is dotted with LOC Ids (e.g., LOC-101). These represent the sanctuaries, ruins, and temples that still breathe life into Iseria.

When your Party enters a square containing a LOC Id, the Cartographer retrieves the corresponding Location Card from the Index and hands it to the Active Player. They read the flavor text aloud. This sets the scene for your interactions. Next, they will choose

an option from the Actions Menu. The storyteller references the card Id in the Location Booklet and reads the responses for each action performed.

Every Location offers specific choices. Some may allow you to rest to reset your Attributes to your Max Token, while others may contain a , , for the Merchant to manage. Other Locations may start an event or encounter.

Location (LOC) Card

- 1 **Location:** Locations within the Location (The Inn, The Shrine).
- 2 **Type:** The type of the location instance.
- 3 **Artwork:** Artwork showing what the location looks like.
- 4 **Description:** Flavor text of what you see when first arriving to the location.
- 5 **Narrative:** The scene as it plays before you.
- 6 **Actions Menu:** Actions or Choices you can make to interact with the location. These refer to the Location Book.
- 7 **Index:** Identifier of the card that is used to cross-reference the Atlas, Maps, Locations, and the Location Booklet.

Booklet Organization

The Location Booklet is organized by region. Each region is organized by multiples of 10, like Lyratha Peninsula starts at index LOC-001 and Aequorea Spine starts at LOC-010. Each feature within these regions are on subsequent pages right after the Atlas.

For example, all the locations that you can visit in the Lyratha Peninsula are within indices LOC-002 through LOC-009, and all the features for the Aequorea Spine is between LOC-011 and LOC-019.

This way, you don't need to flip far to find locations within a particular region.

Diving Deeper

Some Locations have a grid printed directly on the card or booklet for interactions. But, if a Location is complex—such as a dungeon—the card will instruct you to a specific Map (MAP) card.

Location (LOC) Booklet

- 1 **Name:** The name of the location.
- 2 **References:** An overview of the cards and encounters you will need for this location.
- 3 **Features:** Things you can interact with at this location.
- 4 **Action:** Choice that the Active Player can choose. These are usually observations or places, but sometimes are instructions for a location encounter.
- 5 **Response:** Narrative for choosing the Choice. Some responses have nested choices, shown in bold text, that becomes available after reading the response.
- 6 **Nested Action:** A choice that only becomes available after reading a Response with more to reveal.
- 7 **Index:** A cross-reference with the Atlas or Location Card. The booklet has these at the outside of the page so you can flip through the book without any spoilers.

Non-Playable Characters (NPCs)

Iseria is a world full of life and character. From the wandering merchants of the Highland Desert to the dutiful Merfolk of the Lyratha Peninsula, the people you meet are the keepers of the world's secrets. NPCs in Legacy of Celestria are dynamic actors of whom you can interact with. They react to your reputation, and can be permanently changed—or lost—by the choices you make.

When another encounter, like a Day card, Location, Event, or another NPC references an NPC (e.g., NPC-001), they become someone you can engage.

When you choose to interact with an NPC, the Chronicler retrieves their card from the Active Sector of the NPC Index and hands it to the Active Player. The Storyteller references the card Id in the NPC Booklet and reads the responses.

NPC (NPC) Card

- 1 **Name:** Name of the NPC you are interacting with.
- 2 **Title:** Who the NPC is or their affiliation.
- 3 **Portrait:** Artwork portraying the likeness of the NPC.
- 4 **Description:** Text describing the likeness of the NPC as you approach them or they approach you.
- 5 **Narrative:** The initial dialog or narrative describing what the NPC is doing or saying to the Hero(es).
- 6 **Actions Menu:** List of things you can ask or do to interact with the NPC. These refer to the NPC Booklet.
- 7 **Index:** Cross-reference with a Location, Event, and the NPC Booklet. The booklet has these at the outside of the page so you can flip through the book without any spoilers.

NPC (NPC) Booklet

- 1 **Name:** Name of the NPC.
- 2 **Title:** Who the NPC is or their affiliation.
- 3 **Actions Menu:** Actions that the Active Player can choose. These are usually observations or places, but sometimes are instructions for a location encounter.
- 4 **Response:** Narrative for choosing the Action. Some responses have Nested Actions, shown in bold text, that becomes available after reading the Response.
- 5 **Nested Action:** A choice that only becomes available after reading a Response with more to reveal.
- 6 **Index:** Cross-reference with a Location, Event, and the NPC Booklet. The booklet has these at the outside of the page so you can flip through the book without any spoilers.

Marketplace

Items and Weapons are traded through Storefront Boxes. These physical organizers act as the Inventory of the world's shops and loot.

When a Location, NPC, Event, or Map displays storefront icons, like  Equipment,  Weapons,  items, the Merchant player retrieves the corresponding box.

Open the box and lay out the Active Sector cards. These are the goods currently available for purchase. To purchase something, the Hero pays the gold, and the Merchant moves the card from the Storefront Box to the Hero's Backpack or Active Loadout. Note that the storefront only has as much as there are cards. If you run out, there is no more. Furthermore, you can sell items for half the cost, rounding up.

Item (ITM) Card

- 1 Name:** Name of the Item.
- 2 Category:** Categories are keywords for items, they broadly categorize items into groups, like Potions, Keys, Tools, and Explosives, for example.
- 3 Range & Duration:**Range is the number of spaces away an item can be used. Like, a 0 is self-only, 1+ is 1+ spaces away. Duration of the item being used. Consumables provide an immediate benefit. Durables: Provide an active bonus as long as they are in your loadout. Persistables:Provide a passsive bonus as long as they are in your backpack. Reactables: Some items can be used during a Foë's turn as a Reaction, allowing you to dodge a strike or dull an effect.
- 4 Targeting:** Some items have a Target grid indicating that the item, once activated effects all targets within those spaces.
- 5 Price:** The cost in gold coins for the item. Note the selling price is half, rounded-down.
- 6 Artwork:** Image showing the item, which sometimes includes other effects such as damage.
- 7 Effect:** Instructions on what the item does or how it is used. These can be simply drinking it to restore

Items

Items are single-use or limited-use tools kept in your Backpack.

Backpack & Weight

You may carry up to 5 Items at a time. Anything more must be stored in your Hero Box Reserve. Key Cards (KEY) do not count toward your 5-item limit.

You may move items between your reserve and backpack at any time in the World Phase; however, the Commute Rule states that once combat begins, you can no longer switch between the two. Using an item outside of combat is free; however, using an item within combat consumed 1 move.

1 , or more complicated, like to blow-up walls or destroy foes. Some items will deal damage or effect the combat grid, these will be shown over the item's image. Note that items do not consider who is a Hero or Foë and its effects will apply to both, equally the same.

8 Quality: Goods are color-coded by tier, from Bronze to Gold. As the game progresses, certain events will move the inactive items to the active sector.

9 Index: Identifier of the card.

Keys

In the shifting mists of Iseria, some objects hold more weight than others.  Key Cards (KEY) represent unique artifacts, ancient documents, magical focuses, or items of office. Unlike standard Items, Key Cards are never discarded and never count against your Backpack limit. They are permanent additions to your party's legacy, even when instructed to banish or exchange them, because these are keys to trigger progression events in the game.

A Key Card is often the Answer to a puzzle or progressing the plot. When a Location or NPC asks, "Do you have the Silver Lyre?" the physical presence of KEY-005 on your Tableau is your "Yes." Keys are gained as rewards at the end of a narrative branch in the Location

Booklet, Event, or given by an NPC to the Heroes. Even though one Hero holds onto the Key item, all Heroes have access to them.

Keywords

Keywords usually trigger a Key card activation. Keywords are usually a short, unique pass-phrase that appears almost anywhere on the game components, like: Locations, Events, NPCs, Foes, Days, Combat Actions, Maps, for example.

Sometimes, the Keyword is listed on the card itself via a special Action Menu: Trigger and Activation.

Key (KEY) Card

- 1 Name:** Name of the Key item.
- 2 Type:** Type or categories of the key item, like Item.
- 3 Artwork:** Image showing or the effect of activating the item.
- 4 Trigger** A trigger defines how to trigger the Key card. These usually are Keywords. Once triggered, flip the card to the back and move onto its Activation.
- 5 Activation:** Describes what to do when the key is activated via the Trigger. You may be instructed to lookup an Event, draw an NPC, reveal a Location, or reference an Answer (ANS) card.
- 6 Description:** Briefly describes the item, where you received it, sometimes where you need to take it, or other information.
- 7 Narrative:** Narrative description of the key item.
- 8 Index:** Identifier of the card.

The Instance

An Instance is zooming into specific details of the story of Celestria. The Instance will cover Maps, Rooms, and Foes,

An Instance is a self-contained environment—a dungeon, a temple, or a fortified camp—where the World Phase rules are suspended.

When an Event or Location triggers an Instance, the table undergoes a transformation. The Atlas is set aside, and the Cartographer begins constructing using the Map Card as their guide.

Initiating the Delve

When initiating a delve, the game transitions from the World to an Instance. This is where the story becomes physical. You are no longer moving as a single Party; you are positioning your individual Heroes within an encounter.

Maps

To represent these complex environments, the game uses Map Cards (MAP). These are the architectural blueprints of most instances. They tell you exactly which Room Tiles to pull from the box and how to put them together.

Building the Grid

When a Location or Event instructs you to  a MAP, follow the layout precisely. Place the Entrance Tile, every map designates a starting point with a diamond.

Some Map Cards instruct you to only build the first

When entering an Instance, place your Hero miniatures on the designated Entrance squares of the starting Room Tile. Most Instances begin with only the first room revealed. As Heroes move through doors or round corners, the Cartographer will reveal/flip additional tiles face-up.

In an Instance, play proceeds in Rounds and Turns. Every Hero will act, followed by the environment and the Foes. For movement, you may move through a space occupied by an Ally, but you cannot end your turn in the same square. You can interact with a feature by standing on a square with the interactable or an object like a chest, lever, or pillar.

Remember that inside an Instance, walls are physical barriers. You cannot target what you cannot see.

room, adding subsequent rooms only when a Hero triggers an event to  the MAP versions. Note that North on the Map is always the top of the card.

Dungeon Persistence

Unlike the Atlas, where a set of move actions trigger a Day, time in an Instance is measured in Rounds and Turns. However, the world outside continues. For larger Instances, a Day  icon on a Map Card may instruct you to draw a Day Card, representing the exhaustion of the delve.

Map (MAP) Card

- 1 Name:** Name or Theme of the map.
- 2 Floorplan:** Instructions on how to arrange the rooms, connectors, puzzles, etc. according to the labeled grid.
- 3 Entrance:** Room to place the entrance half-tile to. You may choose the any unobstructed side.
- 4 Effect:** Some maps have effects in play when your Heroes are visiting, like drawing a DAY  card, for example.
- 5 Rooms:** Number of rooms to use in construction.
- 6 Connectors:** Number of connectors, doorways, corridors, etc. that link the rooms together.
- 7 Narrative:** Description of the map.
- 8 Mechanics:** Some maps have special rules that apply to them.
- 9 Index:** Index of the card.

Rooms

Room Tiles are modular building blocks of your adventure.

Tile spaces are bounded by the same Borders you learned on the Atlas. A solid black line on a tile is a wall that blocks all but Ethereal movement. If the Room tiles are not adjacent to each other, there is an implied Barrier Border blockign even Ethereal movement.

Features are printed icons on the tiles (such as pits, rubble, barriers, foe types, and loot) have specific rules to follow that affect interactions, placement, movement, and targeting.

Pay close attention to the compass rose on the Tile to ensure North aligns to with the blueprint.

Map cards may list specific Room Tiles to use in the blueprint (like a Puzzle-type Room: SML-503A, or an Encounter -type Room: SML-100A); otherwise, the Rooms are selected based on Map size from the Random -type Tiles. Random Tiles have a Map size requirement where they are only included in Map blueprints of at least a certain number of rooms, like 5+, 10+, 15+, for example.

Random Room Draft

When Random Tiles are referenced, sort the Tiles into groups by size (5+, 10+, etc.) and shuffle them within their groups.

Draw one tile from each group. Repeat until you have enough Room Tiles to complete the Map's blueprint.

It is up to you how you place the Room Tiles. If you want, you can shuffle the drawn Tiles together and place them. You can start with 5+ until you run out, then 10+, etc. Or you can build larger rooms with one 15+ and other 5+ Rooms. However you do it, it is recommended to start in a room that is 5+ unless otherwise instructed by the blueprint.

Backtracking

If the party moves several rooms away, the Cartographer may archive completed tiles by stacking them and placing a marker on the Map card to save table space. The marker on the map card tracks the rooms you've explored, and the stack can be used to backtrack.

Entrance Tile

The Entrance Tile is a special half-mat where your Heroes enter an Instance. Place the tile next to a Room tile where there is open space (not obstructed by Connectors or other Rooms)and place your Heroes on or around the icon in any orientation you'd like.

Configurations

Combined Room

Room with Connectors

Room tiles, 5-inches square, can be combined to make larger rooms, like 10x10, 5x10, and various shaped rooms. Connectors (such as cooridoors, doors, and walls) go in-between Rooms at the center square at the edge of the Room.

Placing Tiles

Place Room Tiles face down on the table. Reveal the first room by flipping all Room Tiles that make the room and any connected Connectors. Most first rooms will only be a single Room Tile. Make sure North is still North after flipping.

When a blueprint shows two Map Tiles connected to form a single room, place them right up against each other. Rooms with Connectors have spaces between them.

Resting in the Dark

Unless otherwise noted, you cannot rest X in an Instance like you can at a Town Location. To recover your Attributes, you must find a use Items or be at a Sanctuary. Items can be used at any time outside of Combat. Sanctuaries are clearly listed in the Room as a Room Effect.

Room (SML) Tile

- 1 **Type:** Type of room the Map Card references.
- 2 **Map Size:** Maps that contain more than a certain number of Tiles. These are 5+, 10+, and 15+, for example.
- 3 **Room Orientation:** Rooms are oriented with North (N) facing the top of the Map card.
- 4 **Room Id and Orientation:** The cross-reference identifier for the Room. Tiles that are not Random have the Id on the back of the Tile.
- 5 **Features:** Icons that have specific rules affecting how you interact with them.
- 6 **Special Rules:** Rules to follow when entering or occupying the Room.

Room features

Containers

Containers can be opened to find loot by spending 1 Move action. Flip over the token and draw from the specified deck matching the icon shown. If it is an armor icon, you may randomly select armor from your current tier, armor chest. If it is a weapon, randomly select a weapon. An anvil let's you choose either armor or weapon. And item gives you a draw from the item deck.

Treasure: Randomly select a Treasure Token and place it on the space. A space containing a treasure marker is not passable, except by flying and ethereal units and abilities. There are two treasure chest icons: brown and blue. Brown chests give the Hero opening it loot, while a blue chest gives each Hero loot.

Crate: A breakable container that may contain loot. Flip over the token, if it is not a red 'X', you may draw from the specified deck matching the icon. Remove the Crate. Crates are impassable until broken. If enemy units attack and damage a crate, the crate is broken and the loot is lost.

Spawns

A spawn indicates the starting location for units. The color and icon of the spawn corresponds to the type of Foe to spawn (for example: Mob, Brute, and Elite), or a where to place the Heroes during an encounter. Place a Foe Token in any space adjacent to the enemy spawn feature. Place Hero Figurine in any space adjacent to the hero spawn feature. Units can move on and pass through spawn points.

If you are out of Foes and cannot spawn any more of that type, then they do not immediately spawn, they are in reserve. Instead, place enemy cube markers on the Foe Token associated with the Foe (FOE) card. When the Foe is defeated, remove a Foe Token from the FOE and spawn the Foe at any enemy spawn matching its icon. Continue until no more enemies are in reserve.

Since Combat only occurs in rooms with enemies and Heroes, when vacating a room with foes, remove the foes from the room and place a Foe Token on any enemy spawn that was not defeated to distinguish that the room still has undefeated enemies.

Obstacles

Pits: Pits cannot be cross into with the exception of flying and ethereal units. Units can be targeted through pits.

Barrier: A barrier is a space that is not passable or targetable through by any unit except for units and abilities that are ethereal. A unit must move around the space containing a barrier. A unit cannot target or affect another unit on the other side of a barrier unless the effect specifies otherwise. by spending 1 Move, a player may attempt to move a barrier. Flip the barrier over. If it is not a red 'X', then move the barrier 1 square into an empty space. If there is a unit on the other side, then that unit is also shifted 1 space. A Barrier can only be attempted and moved once. Sometimes a barrier gives loot, like a Crate. Sometimes there is an enemy spawn, a portal, and other surprises.

Connectors

Exploring

In delves, a connector is the physical component that links Room Tiles together, providing both tactical cover and narrative roadblocks.

When the Map Card indicates a Connector, the Cartographer must place the corresponding token between two Room Tiles along the grid in the center of each Room. Until a connector is resolved (Opened, Smashed, or Unlocked), the area beyond remains hidden until explored.

Standard Thresholds

Hallways: There is clear Line of Sight between the rooms. Heroes and Foes can see through them, but moving through them still marks the transition into a new room. Both you and the enemy cannot attack through a threshold.

Triggers

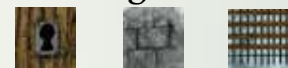

Triggers are icons and an index referencing a particular card or event. To interact with the trigger, you must be out of combat. Spend 1 Move and either draw the referenced card from the index or goto an entry in an Event booklet and follow the instructions.

Graffiti:

There may be other icons displayed on the Room Tiles (for example: a Sun and a Moon). Or there might be icons displayed on the Map card (for example, a wheel icon). These are usually used for puzzles. The instructions are usually referenced by a Trigger or a Key Card.

Blocked Passages

Locked Door Wall Barred Door

The deeper you delve into the Instance, the more your path is blocked.

Locked Doors: If the Connector features a Key symbol, it cannot be opened by standard means. A Hero must first use a Key to unlock the door by both having the required key and spending 1 move to unlock it. The required key shares the same symbol as the icon on the Connector Once a Hero with the correct Key interacts with the door, the door is replaced with an open doorway.

Walls: While most Connectors can be traversed, Walls cannot. Walls require bombs to open. Spend 1 move action to use the bomb item, move out of range of the bomb, and replace the wall token with a corridor token. Be sure to deal any damage to foes (or yourself) if caught in the blast.

Barred Door: A barred door is a sealed door and requires that all the enemies in the room you currently occupying be defeated before you can traverse it. If there is a barred door between two explored rooms

and the room you currently occupy has no enemies, but the room on the other side of the barred door has enemies, the door can be passed from the room without enemies to the room with enemies; however, you may not move from the room with enemies to the room without enemies via the barred door. Once one Hero enters the room, other Heroes may enter the room—barred doors are unidirectional until the enemies are defeated.

Implied Barriers

The edge of a Room is considered a barrier. You have no Line of Sight nor Line of Effect. And even Ethereal, you cannot go through an implied barrier.

Placing Connectors

Connector Tokens are placed inbetween Rooms at the center square of the Room Tile grid.

Exploring an Instance

To maintain the mystery and danger of the delve, Legacy of Celestria uses a Reveal mechanic.

Exploration occurs during the Hero Phase.

Reveal: When a Hero moves to a Connector adjacent to an unexplored, face down room, they reveal all Room Tiles and attached Connectors by flipping them face-side up. Make sure North aligns with the blueprint.

Populate: Immediately place any Foes (FOE), Features, or any other Tokens on the new tile's designations.

Move: If the new tile contains Foes, the any free movement of the active Hero stops immediately and they must now use move actions because combat has begun. The Bestiary player prepares the ACT Deck for combat.

Bonus: The Hero who reveals and moves into a newly explored room gains +1 🍌.

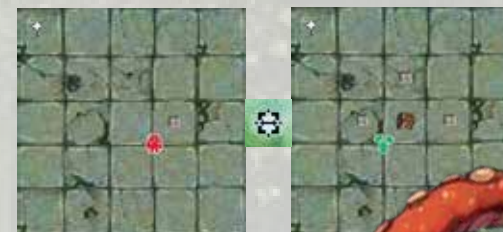

Exploration Mode

For Instances, if there are no Foes present, Heroes do not use the ACT deck. You may move freely and resolve room features at your own pace.

Enemies & Connectors

Enemies cannot cross beyond a Connector. When revealing a new Room, it is up to you whether you want to enter it. Combat only happens in a Room with Enemies.

Room Tiles & Connectors

Implied Barrier

Keeper of the Deep

Moonlit Pearl groaned against the sandbar as you stepped into its ruined hold, the lantern-light catching on scattered treasure chests half-buried in silt. Crates lay split open from the ship's violent grounding, their contents spilling like offerings to whatever lurked below. The air felt thick, expectant—too still for a wreck this fresh. Then the first enemy spawns stirred: barnacle-crust silhouettes rising from behind shattered beams, drawn to the intrusion like moths to a flame.

At the center of the hold, four ancient glyphs pulsed faintly beneath a layer of grime. Their shapes didn't match any sailor's markings—these were older, carved into the ship long before it ever sailed. As you brushed them clean, each symbol flared with cold blue light, humming in a rhythm that vibrated through the hull. When the final glyph clicked into place, the ship shuddered violently, as if exhaling after centuries of holding its breath.

The sea answered. Boards snapped. Water surged upward through the cracks. And from the abyss beneath the stranded vessel, something vast and coiled awakened. The Kraken, long bound by the seal, rose in a bloom of moonlit foam—its shadow swallowing the wreck, its eyes reflecting the stolen treasures scattered at your feet.

Enemies

The enemies you encounter can be shadows that gather in a hollows of a tree, crystal-veined constructs patrolling for some forgotten purpose, or even good people in complicated situations.

Whether the enemies are Mobs, tactical Elites, or the world-shaking Overlords, every Foe follows a specific biological and tactical logic represented by their FOE Card.

Foe Classification

Foes have type classifications of Mobs, Brutes, Elites, Bosses, and Overlords.

Mobs: Small and numerous, they are ambient dangers that work as a group. They pose little threat, but be wary if in large groups.

Brutes: Muscle of Iseria's hostile forces. They are larger, tougher, and more aggressive than Mobs.

Elites: Refined, empowered creatures, or magically altered foes who stand above common threats.

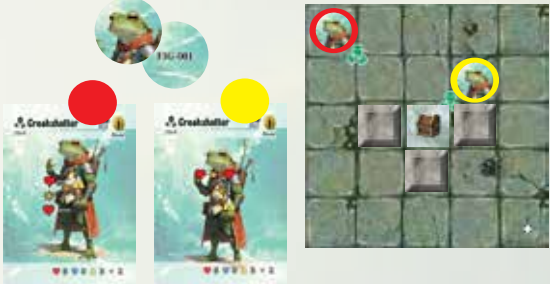

Bosses: Major antagonists, like guardians of corrupted shrines, ancient ruins, leaders of hostile factions. They have signature abilities and phase shifts that often shape the encounter. Defeating one is a milestone.

Overlords: Apex threats of Celestria, they are world-shaking entities, tyrants, awakened primordial forces of myth. They rewrite the rules of the realm and confronting one is Epic.

Fee-fi-fo-fum

Enemies have multiple components, Foe Figs (FFI), Foe Ability Instructions (FAI), Foe (FOE), Foe Unique Mechanics (FUM), and Foe Tokens.

Figures and Tokens

Foe Figures are placed on the combat grid on top of colored Foe Tokens. Each Foe Figure is a representation of the foe on the front, and its Id on the back. Many foes may share the same Foe Figure. The colored Foe

Foe (FOE) Card

- Name:** Name of foe. This is consistent across all the enemy cards.
- Classification/Type:** Classification of the foe, match these to the Spawn feature of a Map, Event, or Combat Action card.
- Keywords:** Any keywords describing the foe. These may be used by Events, Weapons, Abilities, etc.
- Reward:** Icon showing which deck to draw from and its quantity granted on the foe's defeat.
- Foe Token Reference:** A colored Foe Token corresponding to the other token on the combat grid that you setup during combat setup.
- Portrait:** Artwork representing the likeness of the foe.
- HP-Grid:** Coordinate system for tracking damage.
- Grid Summary:** Type and number of each type of HP attributes the foe has.

- Narrative:** Narrative descriptions about the foe.
- Foe Figure:** Reference to the Foe Figure to use on the combat grid.
- Index:** Index of the card.

Tokens are paired. While one token is on the combat grid, the other token is placed on the Foe card. This tells you which foe is which between the Foe card and the one on the combat grid.

Foes

FOE are the core enemy profiles. Each one defines an enemies stats, temperament, tier, rewards, and hp-grid. It is the anchor of every combat encounter, telling players what they are fighting and how dangerous it is.

HP-Grid

Similar to Heroes, who track health on their armor grid, foes track health on an HP-Grid. To defeat a foe, you must fill specific symbols within this grid using your attack patterns. Note that the same foes, often have slightly different hp-grids.

Heart: Foe's life force. You must fill all Heart symbols to defeat the Foe.

Foe Ability Instructions (FAI) Card

- Name:** Name of foe.
- Type:** Classification of the foe, match these to the Spawn feature of a Map or Event.
- Behaviors:** Table of behaviors the foe will attempt to perform during their turn.
- Ability:** Ability information, like range, attack pattern, and effects.
- Reaction:** Instructs what to do when a Reaction node is hit.
- Ability Name and Narrative:** Name of the ability and the narrative on what happens when the ability is performed.
- Index:** Index of the card.
- Threat Cost:** Displays how expensive the behavior is. If there is enough threat on the Threat Wheel, then the foe will use this ability. Note that most foes have a zero threat cost ability.
- Movement:** Explains who the foe is trying to reach or position around, for example: Move 3 spaces away from the Hero with the least health, Fly 4 spaces toward the nearest Hero with the most Wisdom, or Move 3 spaces away from the Hero with the most Valor.

Shield: You must first deal damage to a Shield to remove it before you can damage the node. Pierce damages both the Shield and the node in a single hit.

Carapace: Hardened shell. Requires a specific Might value or a Piercing ability to damage it.

Reaction: If you hit this node without defeating the foe in the same turn, they trigger a Reaction Ability.

Critical: Orange symbols between HP nodes. When damage flows through this segment, bonus damage is dealt to all the slots the arrows point to.

Foe Ability Instructions

Foes react to the Threat Wheel. Each Foe has a corresponding FAI Card that describes its behavior based on the level of threat present. There are only one FAI card per unique FOE involved in combat.

Major parts of the Ability Instructions are behaviors, abilities, and narrative.

- Targeting:** Instructions used to determine where to move and what to target.
- Ability:** The attack or ability the foe performs after moving. Foes will always try to maximize damage whenever possible.

Behaviors

Each row of the behavior table represents one possible action sequence the foe might take on its turn. The player resolves the row that matches the current threat cost and situation.

Foe Abilities

Foe abilities are specific attacks or actions a foe performs when a behavior table row is activated. Each ability defines how the foe threatens the Heroes, whether it be its attack pattern, reach, range, or any other special effects to apply when the ability hits.

It shows the attack pattern—shape or area that the attack covers. Range as distance the ability can reach and is used to determine whether the foe must move first or immediately strike. Some abilities have effects to apply when the target gets hit, like push/pull, buff/debuffs, or environmental interactions.

Foe Unique Mechanic (FUM) Card

- 1 **Name:** The name of the Unique Mechanic
- 2 **Type:** Type of the mechanic, like puzzle, combat, and event, for example.
- 3 **Subtitle:** Brief narrative giving more context to the Unique Mechanic.
- 4 **Mechanics:** Rules for the Unique Mechanics.
- 5 **Index:** Index of the card.

Threat Wheel

The Threat Wheel is a dial that tracks the danger of an encounter and the long-term decay of the world. It represents the Foes finding their rhythm, the air thickening with energy, and the enemies preparing their most devastating strikes.

As the dial turns clockwise from 0 to 11, the difficulty of the Instance scales dynamically. Combat that was manageable at Threat 4 may become lethal by Threat 10. Note that Threat persists between combat.

Growing Threat

The Threat Wheel never turns back on its own. It advances through several specific triggers:

Foe Unique Mechanics

FUM are special rule modules that give a specific foe its signature twist, like phase changes, environmental effects, transformations, or puzzle-like elements, above and beyond what a FOE or FAI would give. They add depth, surprise, and special identity, ensuring a good blend between combat and strategy. FUM usually are for special story battles, Guardians, or Overlords. Unique Mechanics are freeform and contain the rules directly on them.

FUM cards are designed to add or break the rules. If a FUM card contradicts the Rulebook, the FUM card wins. These are Puzzle-Boss mechanics. Look at the environment, check your Key cards, and find the encounter's trick.

ACT Deck: Most Foe ACT Cards feature a Threat icon. When resolved, the Bestiary player advances the spinner by that amount. If the spinner exceeds 11, then it overflows and combat escalates.

Hero Actions: Certain Hero abilities cause the wheel to advance and retreat.

Events: Some Warning nodes or Day Cards will explicitly state: +X.

Overflow and Escalation

When the Threat Spinner exceeds 11, it overflows. The spinner continues its rotation past zero, continuing

along until all the threat is allocated, and the middle wheel is rotated one tick. This reveals a special escalation event that is applied immediately. These can activate foes, add ACT, MOD, etc.

Corruption Wheel

Corruption represents the Level of the World. As Corruption increases, the baseline difficulty of all encounters, also increases.

Threat Wheel

- 1 **Threat Spinner:** Spinner used to track the current Threat level.
- 2 **Threat:** Amount of Threat currently present.
- 3 **Escalation Dial:** Special event occurring when the Threat exceeds its capacity.
- 4 **Corruption Dial:** Current World Level.

Combat Actions

Combat Action Cards (ACT) are used to determine the flow of an encounter within an Instance. Unlike Heroes, who act based on player choice, the world and its Foes act based on the draw of the ACT Deck.

When a new ACT card is added to the deck, the Bestiary Player shuffles it into the ACT deck. During combat, the cards are drawn, resolved, and discarded. If there are no more cards to draw, the discard is shuffled to create a new ACT draw.

Cards are drawn one by one during the Foe phase

Corruption is rarely increased by player choice. It is a moment in the story. When an Event instructs you to increase Corruption the Bestiary player rotates the bottom-most, Corruption, wheel.

Each click of the Corruption Wheel often refers the players to a specific Event to read. This describes how the physical world of Iseria is changing—forests withering, mists thickening, or new Foes emerging on the Atlas.

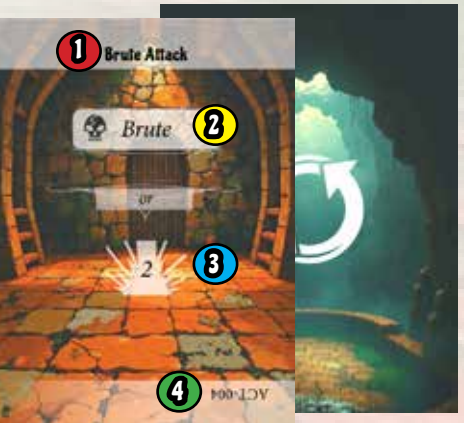

every turn. The card tells who takes their turn next, to increase Threat, or gives instruction on what to do.

Most cards have conditions to follow, like “Brutes go **or** increase Threat by 2”, “Elites go **and** increase Threat by 3”. Actions are performed in order from top to bottom. If the specified foe is present in the combat, they go; otherwise, if they are not present—in the case of **or** and **and**—Threat increases.

Some cards are special, thematic cards with rules on them. When encountered, does what it says.

Combat Action (ACT) Cards

- 1 **Name:** The name of the Combat Action.
- 2 **Type:** Foe type whose turn it is.
- 3 **Threat:** Amount of threat that increases.
- 4 **Index:** Index of the card.

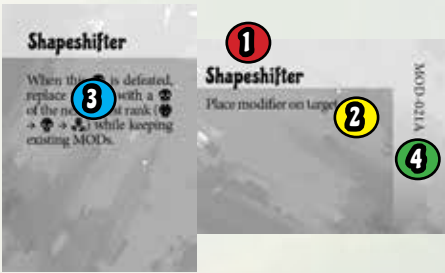

Modifiers

Modifier Cards (MOD) are temporary effects which are applied to any card. A modifier lists where to apply the rule. Modifiers change the rules for many things, like a Hero's Ability, Weapon, or Foe's HP-Grid. Some modifiers even give extra rewards after an encounter. If they do, it will be listed on the card.

Modifier (MOD) Card

- 1 Name: Name of the Modifier.
- 2 Rules: How to apply the Modifier.
- 3 Rules: Describes what to do.
- 4 Index: Index of the card.

Rally and Withered

Some intrinsic actions, like the Rally printed on your Tableau, feature the Wither Attribute icon, like: [symbol-]. This indicates that the effort is so taxing it permanently reduces your maximum potential for that attribute until restored by an Event or Rest.

Puzzles

Puzzles (PZL) are non-combat barriers that test the party's Wisdom and collective deduction. They often guard the most valuable Key Cards or act as a thematic gate to a further the story. Unlike a Foe, a Puzzle cannot be defeated by Might alone; it requires the correct Reference and the physical alignment of a Cipher.

Triggering a Puzzle

Puzzles are encountered at Locations or triggered by Events, NPCs, or within Rooms. The Booklet will

provide a Source Id (e.g., LOC-112) and instructions on which Cipher to retrieve. You must interact with the Cipher. For a wheel, this means spinning the various layers using context clues, and looking for the answer, like in an eyelet for a reference to an ANS card.

Once you believe you have the solution, retrieve an Answer Card (ANS) to verify the result and follow its instructions. If an ANS card does not exist, then try again.

Cipher Wheel (Case Study)

The Celestial Wheel Cipher has four layered wheels, each one a cosmic theme for which clues are given.

- 1 Planets: Planetary alignments for each of the Zodiac. It has the name of the ruling planet and its symbol. It starts with the moon and ends with Uranus.
- 2 Zodiac: Each Zodiac sign, its name, symbol, season, element, flower, and stone.
- 3 Sun: Position of the sun during its solar cycle. Yellow is a full sun, black is an eclipse.
- 4 Moon: Position and phase of the moon during its luanr cycle. Blue is a lit moon, black is its shadow.
- 5 Result: Eyelit revealing which ANS card to check.

Answers

Answer Cards (ANS) are specialized components that remain in the Inactive Sector inside the box until the game explicitly calls for them by Id. They represent the final resolution to the world's riddles. Unlike Location or Event cards, which describe a situation, an Answer Card provides the definitive result of your success—without spoiling the mystery if you fail.

Riddles & Answers

Because a single Answer card contains the solutions for multiple, entirely different puzzles, you will frequently

return to the same ANS Id throughout your campaign. The cards are designed with False Leads. If you attempt to solve a puzzle with the wrong logic, you simply won't find your Source Id, preventing you from accidentally reading a spoiler for a different part of the game.

When you think you have found an Answer draw an Answer card matching the value you've deduced. Check the Actions Menu to see if the component requesting the look up—the Source Id—is listed in the menu. If it isn't, Try again; otherwise, if it is, flip the card and find the Source Id again and immediately follow its resolution.

Answer (ANS) Card

- 1 Name: Name of the Answer which usually is some number referenced from a Puzzle.
- 2 Actions Menu: The Menu contains the source of the check, like ANS-001 is being referenced from EVT-503, for example. References could be Ids from Puzzle Wheel alignments, Key Card activations, or Events. The source is the component requesting the ANS card.
- 3 Answer: Tells you what to do next, or gives you the Answer. Resolve it. Sometimes, it simply tells you to Try Again—you are close.
- 4 Index: Index of the card.

Celestial Secrets

Moonlight filtered through the broken dome of the Labyrinth of the Crescent Moon, silvering the dust that drifted in the still air. The Celestial Wheel stood at the chamber's center—an ancient stone disc layered with interlocking rings, each etched with planets, zodiac sigils, and the shifting faces of sun and moon. The Vanguard steadied the outer ring, muscles tense as the grinding stone echoed through the hall. Beside him, the Sage traced the murals lining the walls, her fingers gliding over constellations carved in spirals and arcs. Each mural whispered a clue: a planet aligned with a beast, a zodiac sign paired with a season, the moon's shadow cast across a rising sun.

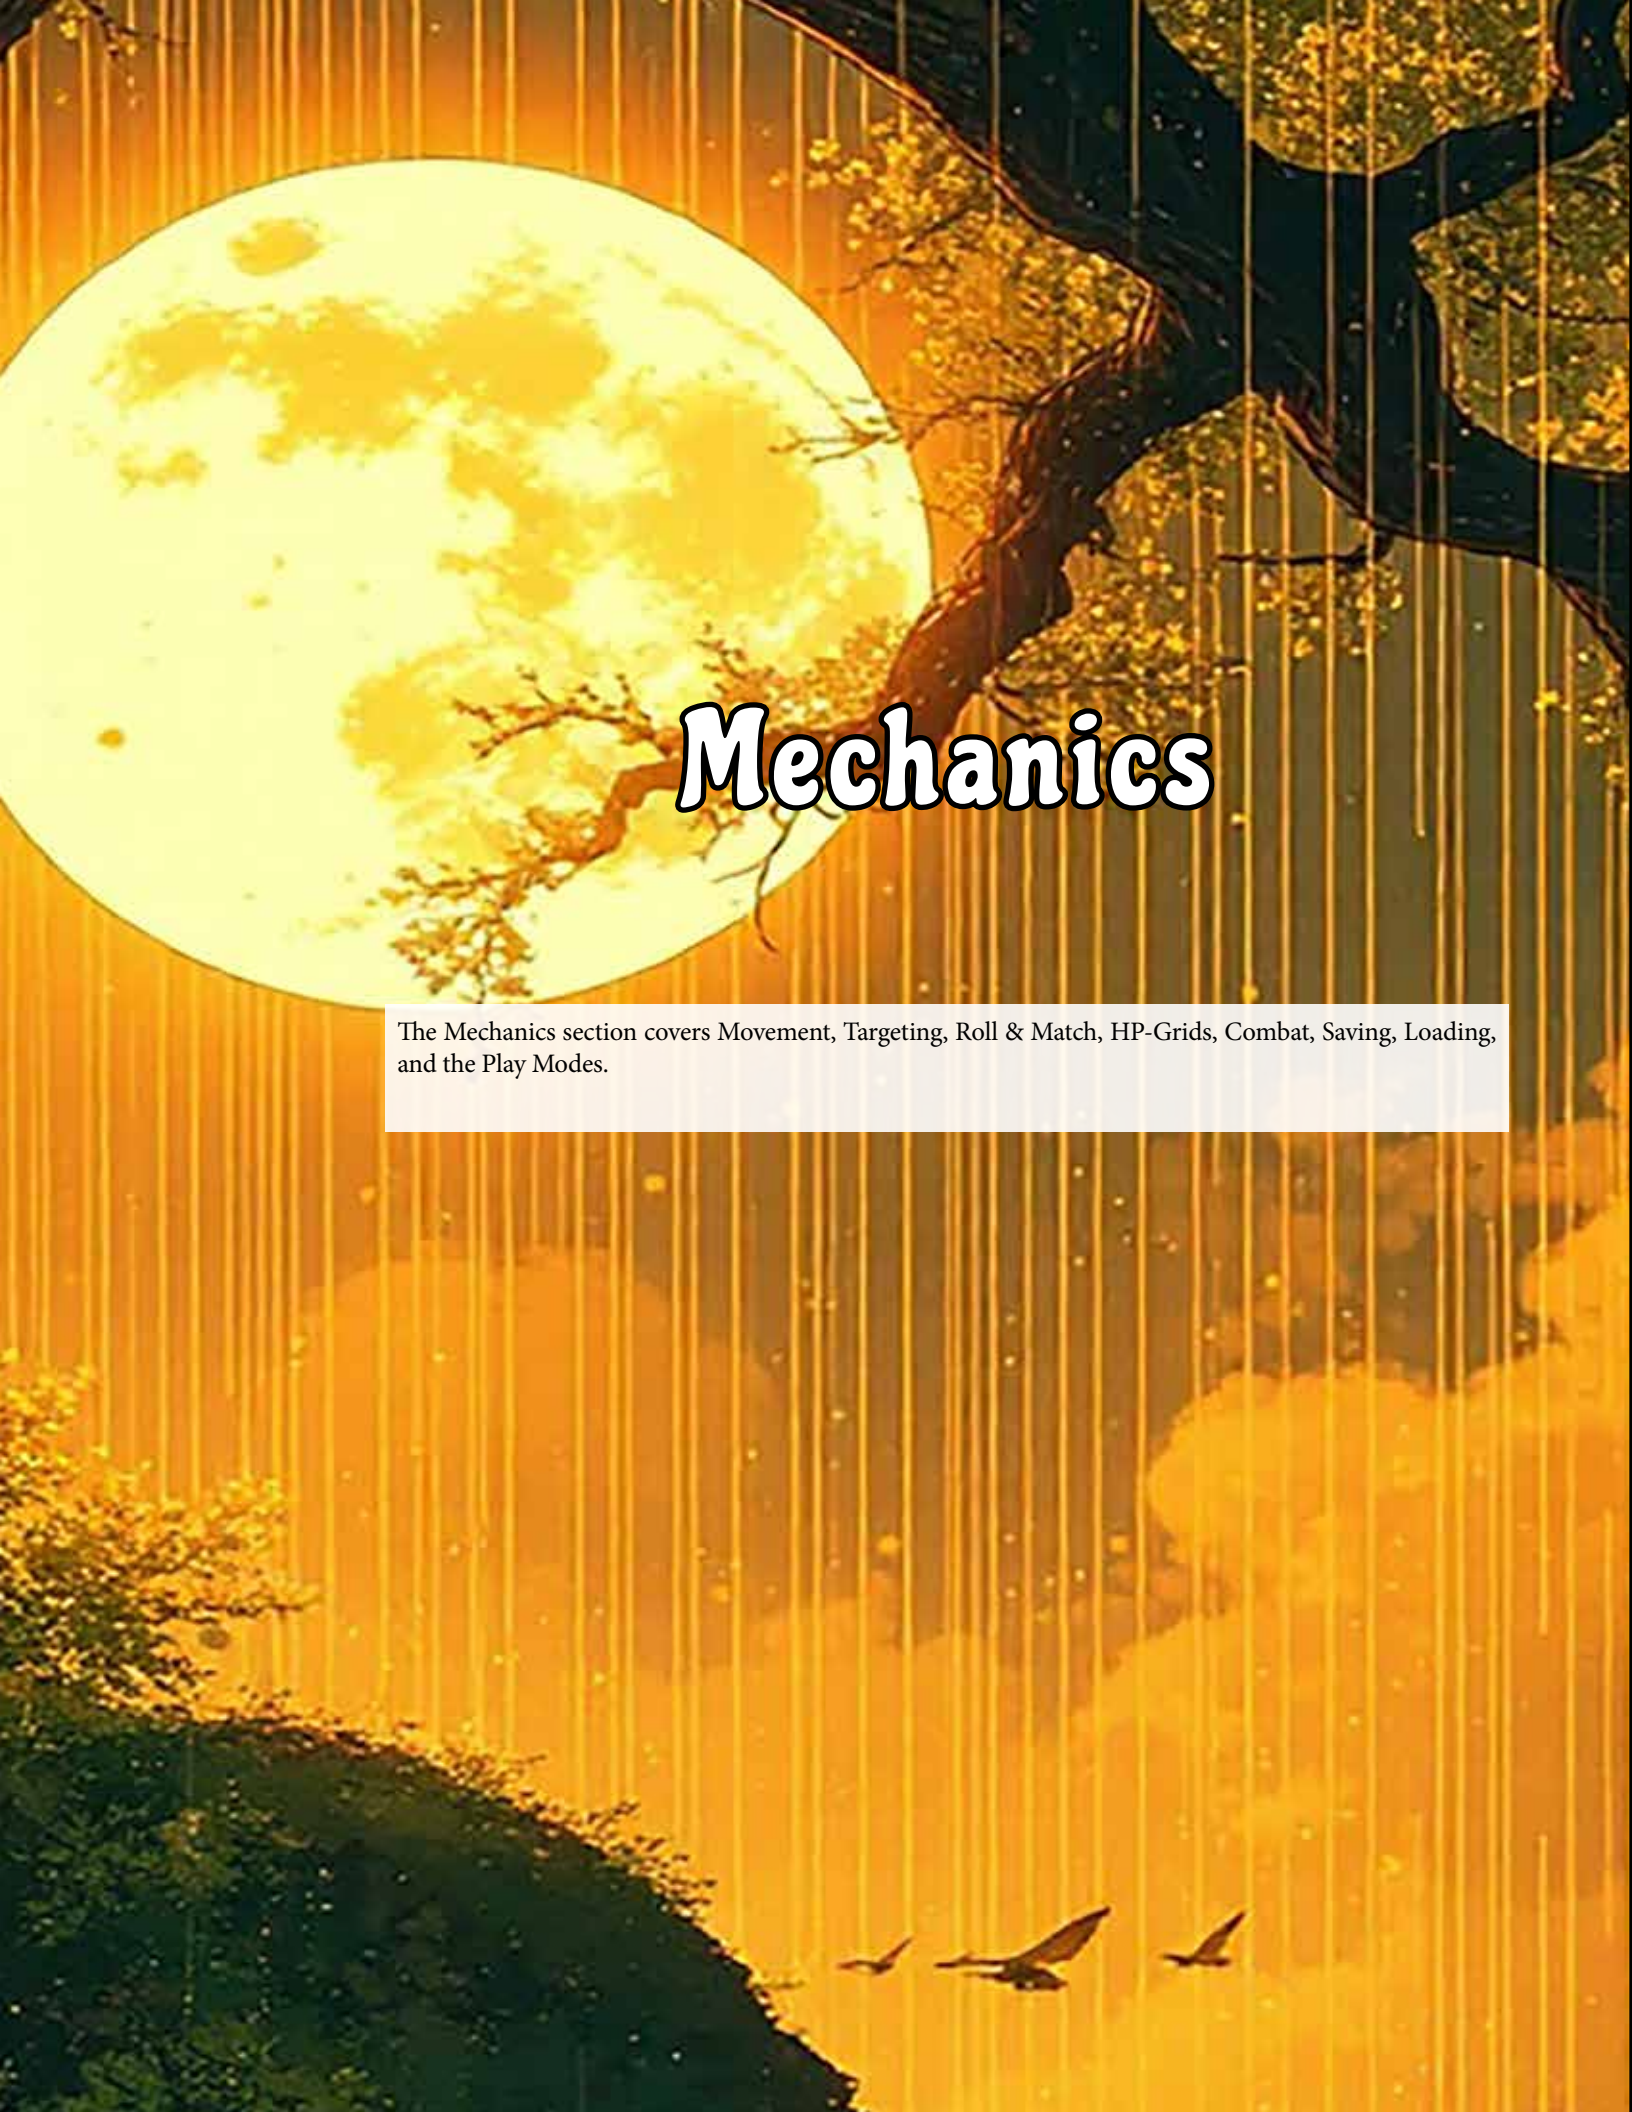

The Pathfinder moved between them, calling out alignments as he deciphered the star-maps. "Rotate

the lunar ring three steps—no, wait—match it to the waning crescent." The Warblade, impatient but precise, shifted the inner disc with a controlled shove, locking it into place as a deep hum resonated beneath their feet.

When the final sigil clicked into alignment, the murals shuddered. Lines of pale light raced through the carvings, illuminating the chamber in a soft celestial glow. The wall behind the largest mural rippled like disturbed water, then split open, revealing a hidden passageway descending into darkness.

A cold breeze drifted out, carrying the faint metallic scent of old magic.

The antechamber of the Guardian awaited. The heroes exchanged a steadying glance before stepping through, knowing they had just awakened something far older than the labyrinth itself.

Mechanics

The Mechanics section covers Movement, Targeting, Roll & Match, HP-Grids, Combat, Saving, Loading, and the Play Modes.

The Mechanics section covers Movement, Targeting, Roll & Match, HP-Grids, Combat, Saving, Loading, and the Play Modes.

Movement & Targeting

Movement

Whether you are marching across the continent on the Atlas or sidestepping a corrupted brute in a labyrinth, your movement is governed by the same fundamental laws of the Movement Grid.

On the Atlas, your movement represents miles of travel. Every step is a choice: do you take the safe, paved road, or risk the Difficult brush to shave a day off your journey? Remember, time is the one resource even the most powerful Warblade cannot reclaim.

All movement and range are calculated in Spaces; or otherwise known as a unit square.

Your movement is orthogonal. You may move into any of the four squares surrounding your current position

Moving into a square usually costs 1 point of your **⚡** (Green) attribute. However, the world is rarely a flat plane. You must pay attention to the Borders you cross.

Movement Types

Your character or equipment may grant you a specific Movement Type:

⚡ Grounded (Foot): The standard. You must pay all border costs and cannot pass through Barriers or Impassable terrain.

🦅 Aerial (Wings): You soar over the world. You ignore all border costs except for Barriers (Solid Black). You may end your turn over Impassable terrain (like a chasm), but you cannot end your turn in the same square as another unit.

👻 Ethereal (Ghost): You exist partially in the Viel. You ignore all border costs, including Barriers. You may move through walls and Foes, though you cannot end your turn inside them.

Movement Border Types

Sample	Name	Meaning
	Standard (Single Dash)	1 Move.
	Difficult (Double Dash)	2 Move.
	Impassable (Solid White)	Blocked for Grounded ⚡ units.
	Barrier (Solid Black)	Blocked for Grounded ⚡ and Aerial 🦅 units.
	Obscured (Black Dash)	Blocks Line of Sight, you still know that the unit is there and can move toward them.
	Obscured Difficult (Double Black Dash)	Blocks Line of Sight and costs 2 Move.

Movement & Targeting

Movement

Whether you are marching across the continent on the Atlas or sidestepping a corrupted brute in a labyrinth, your movement is governed by the same fundamental laws of the Movement Grid.

On the Atlas, your movement represents miles of travel. Every step is a choice: do you take the safe, paved road, or risk the Difficult brush to shave a day off your journey? Remember, time is the one resource even the most powerful Warblade cannot reclaim.

All movement and range are calculated in Spaces; or otherwise known as a unit square.

Your movement is orthogonal. You may move into any of the four squares surrounding your current position

Moving into a square usually costs 1 point of your **PP** (Green) attribute. However, the world is rarely a flat plane. You must pay attention to the Borders you cross.

Movement Types

Your character or equipment may grant you a specific Movement Type:

👤 **Grounded (Foot):** The standard. You must pay all border costs and cannot pass through Barriers or Impassable terrain.

✪ Aerial (Wings): You soar over the world. You ignore all border costs except for Barriers (Solid Black). You may end your turn over Impassable terrain (like a chasm), but you cannot end your turn in the same square as another unit.

☁ **Ethereal (Ghost):** You exist partially in the Viel. You ignore all border costs, including Barriers. You may move through walls and Foes, though you cannot end your turn inside them.

Movement Border Types

Sample	Name	Meaning
	Standard (Single Dash)	1 Move.
	Difficult (Double Dash)	2 Move.
	Impassable (Solid White)	Blocked for Grounded 🦶 units.
	Barrier (Solid Black)	Blocked for Grounded 🦶 and Aerial 🦅 units.
	Obscured (Black Dash)	Blocks Line of Sight, you still know that the unit is there and can move toward them.
	Obscured Difficult (Double Black Dash)	Blocks Line of Sight and costs 2 Move.

Targeting

Like movement, targeting requires a clear path through the world.

Range

To target a Foe, they must be within your ability's ③ Range and you must have a clear Line of Effect. If the given range is 3 ③, then you can target units from your current space to 3 spaces. If the range is 2-4 ③, then you can target units occupying 2, 3 and 4 spaces away. Unlike Movement, Range can be counted diagonally.

Line of Effect (LoE)

Draw a straight line from any corner of your space to any corner of the target's space. If the line passes through a Barrier (Solid Black), the target is invalid. If passing through an obscured (Black Dash) that is not occupied by the actor, it is also blocked.

Targeting Vs. Starting

Note that the Targetable Position (the grid diagram) on a weapon defines where the strike can land relative to your Hero, while the Ordered Pattern dictates how the damage actually travels once the hit is initiated.

Note: LoE can gain the benefits of movement types: ③, ④, ⑤. AoE effects flow through obscured borders, but not Barriers.

Targetable Positions

Some abilities use Positional Grids (3x3 or 5x5 diagrams) instead of simple Range. These allow for Area of Effect (AoE) strikes or Step-and-Strike maneuvers.

▲ **The Origin:** The center of the effect, usually your Hero.

✕ **The Target:** Valid squares for the ability.

- **The Snap:** Lock onto the grid at intersections.

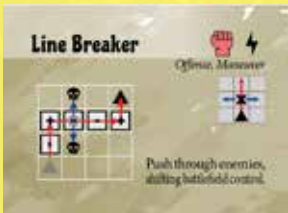

Rotation: You may rotate these grids in any of the four cardinal directions to aim your strike.

Large Foes (2x2): When an AoE hits a Large Foe, choose one square they occupy. They are only affected once.

Targetable Position Icons

Sample	Name	Meaning
	Red Arrow	Movement you take during the attack.
	Blue Arrow	A Pull/Push effect on the target.
	Bold Border	Must target all units in the area, friend or foe.
	Dashed Border	You may select a number of targets specified by the attack.
	Solid Circle at corner of grid	Targets a corner, affecting the four squares touching that intersection.
	Triangle	Actor/Origin
	Bold 'X'	Target

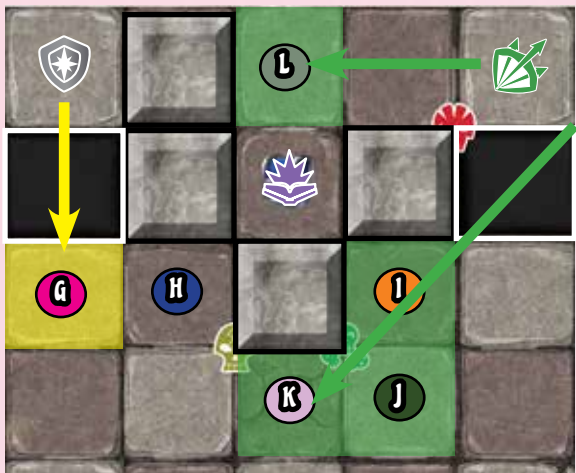

The Vanguard starts just west of the 2 skull spawn and uses Line Breaker with enough star dice movement to move next to the 3 skull spawn. Foe D is pushed north because the stairs

has impassable to the west and east, but could have been pushed south and south (only taking 1 once). E is pushed south because there is an unopened crate blocking movement to the north, but could have been pushed west. F is pushed north, but could also have been pushed west or south.

The Pathfinder can target A and B, but not C because C crosses two Obscured borders. A is targetable because you have direct LoE to it. B has a single Obscured border and you are adjacent to it, so you have cover, B does not. However, if using the Rain of Stardust ability, you can hit C when targeting the corner of the combat grid between B and C.

The Vanguard can only attack G because the Bulwark Lance has melee range 2 and the Barrier to the East blocks L.

The Pathfinder can attack I, J, K, and L because the Stormbranch Bow has at most 3 range and LoE is from corner to corner. H is blocked by Barriers.

The Sage cannot attack with the Seer's Whisper Tarot because L is too close, K is blocked by a Barrier, and H does not match the Targetable Position.

Weapon & Ability Patterns

Every Weapon and Ability in your arsenal communicates through a visual shorthand of Patterns. Patterns are composed of individual Nodes, each representing a specific slot where a die or marker must be assigned to manifest the intended effect. Understanding the flow of these nodes is the difference between a clumsy swing and a legendary strike.

When assigning dice to patterns, place the dice on the card, next to or over the pattern.

Required Patterns

Most Abilities utilize Required Patterns, identified by their distinct  square-boxed nodes. These abilities represent complex maneuvers that require a Hero's total focus. To activate a Required Pattern, every single node within the sequence must be fulfilled by assigning the correct dice values simultaneously. If a pattern consists of three nodes   , you cannot partially activate it, (e.g., '-', '+', blank) on  Wisdom dice.

Some abilities feature the  Repeat Icon with a nested constraint, such as . This indicates the ability can be repeated multiple times in a single turn. For every full completion of the Required Pattern, you may trigger the effect again, up to the limit of the nested icon. For example, a Hero with a Wisdom Attribute of 3 could activate a repeatable ability three times, provided they can assign the necessary dice to fulfill the entire pattern three separate times.

Certain duration-based abilities feature  Locked Nodes. When a die or marker is assigned here, it is physically held on the card until the start of your next turn. While you may choose to remove these items between turns to reclaim your dice, doing so immediately deactivates the ability's ongoing effect.

Ordered Patterns

Weapons and offensive skills utilize Ordered Patterns, which are visually mapped onto the HP-Grid. These patterns are represented by damage-shapes ( or ) containing specific dice values. Unlike Required Patterns, you do not need to complete the entire sequence to see a result; each successfully assigned node results in a point of damage. However, these patterns must be completed in a strict linear flow from start to end, tracing the Hero's physical movement through the strike.

Directional Flow: An  Arrowhead marks the starting point and initial direction of the strike. As the attack moves from node to node, the direction may shift, guided by the tail-to-head orientation of the  shapes. These patterns follow a grid logic, allowing for strikes to move in any of 8 directions across the HP-grid.

Aimed Flow: A  icon marks a starting point without a direction. These non-directional nodes do not trigger  critical points. After a , may extend a  Directional Flow, these then follow the rules of the Directional Flow, and can trigger  critical points.

Piercing: Nodes decorated with a blue box possess the Piercing keyword. These are specialized strikes designed to shatter enemy defenses. When a Piercing node overlaps an enemy Shield , it immediately removes the purple, armor cube , allowing the damage of that node to penetrate to the heart  beneath.

Visual Aid: To assist in tracking your progress through a complex strike, later nodes in a pattern feature a darker background, transitioning from white to dark gray as the attack reaches its conclusion.

Node Requirements

When assigning dice to a pattern, you must match the symbol found within the node:

Sets: Represented as  , this requires two or more dice of the exact same value. These can be fulfilled by either  or  dice.

Runs: An alphabetical sequence,   , representing a numerical run (e.g., 2, 3, 4). Notably, through the use of Wisdom Nudges, these can even include negative sequences (e.g., -1, 0, 1) and values greater than 6 (e.g., 7, 8, 9).

Attributes: Icons like  or  require the immediate spend of a resource, while  advances Threat by 1.

Markers and Refresh: Nodes containing a  require a class-specific token (like a Hunter's Mark). If an ability features the  icon, it begins the encounter with markers already placed; using the ability requires removing the marker to trigger its effect.

Roll & Match

The transition from planning to execution happens here. Allow the luck of your roll to guide your decisions. To roll and match, you will pool your dice, roll, make adjustments, and match. Finally, activate.

Pool

Build your Dice Pool. Draw a number of  Might and  Wisdom dice as designated by your Hero Tableau Attribute values. Your Tableau is the living record of your Hero's state; it already reflects your base potential, any equipped armor bonuses, and other effects.

Scan the table for any active Modifier Cards or Foe-specific traits that might alter your pool. Once the dice hit the table, the tactical puzzle begins.

Roll, Adjust

Roll your dice. Your Wisdom  dice can nudge values. You may use  and  values to change the value of your Might  dice. For example, you can assign two  results to turn a 5 into a 3, or up to three  results to turn a 5 into a 6, 7, or 8.

You may play Item Cards to add more dice to your pool or adjust values at any time. For example, if you need 1 more  die, you may use an item adding one.

And Match

Once the dice hit the table, you move from generation to allocation. Assign your dice results to specific spaces on your Weapons or Abilities matching the patterns.

Your  Might dice (d6s) are the engine of your turn, primarily fueling attack patterns and raw damage. Your  Wisdom dice (fudge dice) represent your mental and arcane acuity to manipulate your encounter.

A single die can only be assigned per requirement per turn. If you assign dice to activate a weapon or ability, those dice cannot be used elsewhere, creating a high-stakes balancing act: do you commit everything to a massive strike, or spread them across multiple?

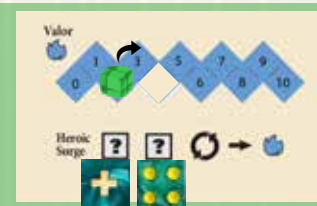

Finally, Activate

The final step is to activate your weapons and abilities. The effects of activation are listed on the Ability Card and Attack Patterns are listed on the Weapon Card.

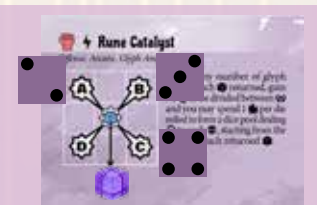

Taunt can be activated multiple times to either increase or decrease the Threat level during combat, as long as you can assign pairs of dice. The Vanguard is assigning 2 sets of [5][5] and   to reduce the Threat level by 2.

Activate Heroic Surge by assigning two of any dice. This can be done multiple times as long as you have dice to assign. Heroic Surge is a great way to turn dice that don't match patterns into Valor, which can be used immediately, or saved for later.

The Sage can return any Arcane  placed on HP-grids as wounds to activate Rune Catalyst. They spend 4  to roll 4  dice resulting in [2][3][3][4], and assigning 3 dice as a run of [2][3][4], dealing  according to the Ordered Pattern nodes to the origin of each  removed on foes.

HP-Grid & Damage

A Foe's vitality is not a single numerical HP value, it is a spatial puzzle called the HP-Grid. This grid is a unique diagram found on every Foe Card, representing the creature's physical form, armor plating, and vital organs. When you perform an attack you are carving a path through this grid and every point of damage you assign from your Ordered Pattern, from weapons and abilities, corresponds to a single space on this grid.

Resolving Damage

Damage is resolved one node at a time, following the flow of your attack pattern. You begin by choosing your first point of impact, then you trace the pattern across the grid.

Life Nodes (♥, ♠, ▲, etc.) are the HP of foes. When a node in your pattern overlaps an HP-grid node, you place a Wound Token ☼ on that node. Once every node on the grid has ☼, the Foe is defeated. Remove the Foe from combat and clear its card.

Once a node is wounded, it cannot be wounded a second time. If your attack pattern passes through a wounded node, that damage node is consumed. Try to not overlap nodes already damaged.

If your pattern flow takes the strike off the edge of the HP-Grid before all nodes are assigned, the remaining damage is forfeit.

A Hero's HP-Grid is the Armor they are wearing and the nodes are the slots with armor assigned on their Hero Tableau. If no armor is assigned to a slot, then

damage passes through—does not consume the attack pattern node—to the next slot until armor is hit, taking ☼, or the it flows off the edge of the HP-Grid.

Criticals

Some HP-Grids contain * Critical nodes offset from the graph in half-node positions. If your directional damage (indicated by an ➤ or ➡) passes through or lands on a Critical Node, you trigger a bonus damage effect or a specific weapon special. Aimed damage (☼ attacks without a directional arrow) does not travel and therefore cannot trigger these path-based Criticals.

When a * Critical node is hit, follow the arrows ➡ and deal ☼ to those nodes, too. This bonus does not carry your Pierce or Shatter damage keywords.

Armor

Many Foes are protected by Shield ♠ nodes. When preparing a foe for combat, place a purple, foe marker ☼ on the node to representing the creature's armor.

To clear the ♠ and remove the ☼ you must damage the node twice—the first to remove the ☼ and the second to damage the node. However, if your damage has Pierce or Shatter, then it ignores the ♠ node, remove the ☼ and damage the node in a single attack.

Carapace

Some Foes are protected by Shield ♠ nodes with values. Since these are special and you want to see the

needed value, do not place foe ☼ on them. When they are damaged, they will have a ☼ token on it.

Ordered Patterns do not pass through Carapace. When hit, they immediately stop, and do not continue their pattern. To clear the carapace nodes, the damage node must match the value within the ♠ node. On a match, apply a Wound Token ☼ to the Carapace node.

Carapace ignores Pierce and Shatter damage.

Marker Cubes

Beyond raw damage, Heroes can tag Foes with specialized cubes ☼ to set up devastating future

turns. These are color-coded to your class—such as the Pathfinder's Hunter's Mark or the Sage's Arcane Glyph.

Certain Required Patterns allow you to assign a ☼ to a Foe. This marker is physically placed on a specific node of the HP-Grid, Behavior, Combat grid, etc.

While a ☼ remains, it may grant bonuses like +1 ☼ to all attacks hitting that space or trigger a ☼ ability when you decide to consume the ☼.

Markers usually persist on the Foe's HP-Grid even between rounds acting as a durable effect until the foe is defeated or an ability explicitly removes them.

Boggy attacks the Pathfinder with Mist Jab, dealing 2☼ from the right to left. The Pathfinder places the ☼ with the Bracer, it bypasses the Feet since there is no Armor and continues to the Armguard. Next, Boggy attacks with Muck Swipe for 2☼ from right to left. The Pathfinder takes the ☼ to their Armguard, but since the left-slot of the Armguard already has ☼, the second attack node is consumed and it is not applied.

The Vanguard deals two damage from left to right. They ☼ the first left ♥. The pattern continues to the ♠, since it isn't Pierce, the ☼ is removed.

The Sage deals two damage from bottom to top. They ☼ the first bottom ♥. The pattern continues to ☼ the second ♥. Since the pattern moves through a *, bonus ☼ is applied to the right ♥.

Kraken leaves the battle, keeping ☼. Respawn all defeated tentacles with full ♥.

If a ♠ is hit, immediately perform the ♠ ability before continuing ☼.

With Echo of the Fallen, 2 Arcane ☼ can be ♠ to gain +1 ♠, the two ♥ beneath still has ☼.

Converts ☼ into ♠.

Combat

Combat in Legacy of Celestria is a tactical, high-stakes encounter resolved on a grid. It is triggered the moment a Hero enters a space containing Foes, typically by opening a door to a new room or triggering a specific narrative Event. Unlike the exploration of the Atlas, combat requires precise positioning and the management of immediate threats.

Setup

When the transition to battle occurs, players must place Foe figures on the grid as indicated by the scenario. Mobs 🐾, Brutes 🐉, and other entities are assigned to their designated spaces. Use colored chips to link each figure on the board to its corresponding FOE Card on the table.

If there are not enough FOE figures or FOE cards, then the extra FOES do not immediately spawn, they are in reserve. Instead, place enemy cube markers on the Foe Token associated with the FOE card. When the Foe is defeated, remove a Foe Token from the FOE and spawn the Foe at any enemy spawn matching its icon. Continue until no more enemies are in reserve.

Before the first blow is struck, the ACT Deck must be prepared by retrieving the active cards from the Bestiary

Index and shuffling them face-down.

The Threat Wheel typically retains its current level from the World unless the encounter instructions indicate a reset. Heroes also maintain their current Attribute and Valor levels, ensuring that the consequences of previous travels weigh on the coming fight.

Combat itself is structured in Rounds, defined by every player at the table taking a complete turn in clockwise order, beginning with the Hero who triggered the encounter.

Phase 1 – Hero Phase

Each player’s turn is divided into two distinct halves. During the Hero Phase, the active player performs their character’s actions.

Movement is highly flexible; a Hero may move at any time—before an attack, after, or split before and after—as long as they stay within their total allowed ⚡

This is followed by the Roll & Match sequence, where the player rolls their 🎲 and ★ pools, assigns dice to their loadout, and resolves the impact.

Items may be used at any point during this phase to swing the odds.

Finally, the Hero resolves all damage to Foe HP-Grids and most likely performs a Surge, converting any remaining unused dice into Valor.

Phase 2 – Foe Phase

Once the Hero has completed their actions, the enemy retaliates. The active player draws the top card of the ACT Deck and resolves it immediately.

If a Foe Activation card is drawn (such as “Mob,” “Elite,” or “All Foes”), every corresponding entity on the board must act. If there is no corresponding entity, then increase the Threat by spinning the Threat wheel spinner to increase it.

If a Threat Event or a specific combat effect like “Pause in Battle” appears, the instructions on the card are followed, often resulting in a rotation of the Threat Spinner.

This phase ensures that the enemy’s pressure is constant and interspersed between every Hero’s contribution.

Foe Activation

When a Foe acts, it follows the logic of its FAI Card, managed by the player who drew the ACT card for movement and the Bestiary Player for the costs.

Foes follow a strict hierarchy of activation: Overlord → Boss → Elite → Brute → Mob. So, if “All Foes Go”, follow this order.

A Foe always triggers the most expensive behavior it can afford from the Threat Wheel. If the spinner is at 5, and the Foe has behaviors costing 2, 4, and 6, it will spend 4 Threat to execute its strongest possible attack.

The Foe resolves its Movement (Toward or Away) first, followed by its Ability. If a Foe has two equally valid paths or targets, the players decide the outcome.

Escalation

The Threat Wheel is the engine of enemy momentum. Threat is gained when ACT cards are drawn, when certain Foe actions occur, or when Heroes trigger certain abilities. While Foes spend this Threat to fuel their FAI, the pool is limited.

If the Threat Spinner exceeds 11, it resets to 0 and continues adding until the increase is complete. This

Overflow triggers an immediate spin of the Combat dial to resolve a Threat Event. In the heat of combat, this rotation can change the battlefield instantly, triggering “All Foes Go” maneuvers or applying temporary Modifier Cards that shift the balance of power in either the favor of the Heroes or Foes.

Ending the Encounter

Combat ends in Victory when all Foes are defeated or when the scenario objective is met, allowing Heroes to claim rewards. However, if all Heroes fall with no Rallies remaining, they are Defeated. In a Legacy game, this forces an exit to the Atlas; in a One-Shot, the encounter is entirely lost.

Reactions

Combat is a living environment. Warning ⚠ nodes on a Foe’s HP-Grid trigger immediately upon receiving damage. This can occur in the middle of a Hero’s attack pattern, potentially interrupting your turn with a sudden Foe counter-attack or tactical movement before your strike is even finished.

Skirmish at the Gates

The last clang of steel faded into the entrance of the castle as the Pawladin finally staggered back, armor dented, tail drooping in exhausted indignation. The Vanguard stood before him like an unmovable bastion, shield braced, breath steady—every inch the wall that had held the line while her companions maneuvered. A final shove sent the canine tumbling onto his back, paws splayed, a soft whuff of surrender escaping him.

To the side, the Warblade spun his weapon once, letting the momentum bleed away. His duel with the Roarior had been a blur of claws and steel, the cat darting with predatory grace. But precision beat speed: a clean parry, a twist, and the Roarior’s blade clattered to the ground. The feline froze, whiskers twitching in disbelief before slumping into a dramatic, defeated heap.

Above them, perched on a broken pillar, the Sage lowered her staff. Threads of shimmering energy unraveled from the air. Her wards had redirected strikes, slowed lunges, and kept the battlefield tilted in the heroes’ favor.

The Pathfinder emerged from the nearby brush, bow still half-drawn. He had cut off escape routes, marking weak points, guided the flow with every arrow and footstep. Now he gave a short nod, satisfied the field was secure.

Play Modes

One-Shot Scenarios

A One-Shot Scenario is a self-contained experience designed for a single session. It drops the party directly into the heart of a specific conflict, bypassing the long-term progression of the Legacy. These scenarios are perfect for learning the Roll & Match system, testing high-level Hero builds, or enjoying a focused story without the commitment of a campaign.

In a One-Shot, the Setup instructions in the Scenario Booklet are absolute. They will dictate your starting Loadout (which Bronze, Silver, or Gold abilities you possess), your current Valor, and the initial state of the Threat Wheel. Because there is no tomorrow in a One-Shot, you are encouraged to spend your resources—including Rallies and Consumables—with reckless abandon. The encounter is won or lost based solely on the objectives of that single map. If all Heroes fall to 0 Health and have no Rallies remaining, the scenario is lost, and the mists of Iseria reclaim the timeline.

The scenario defines your tier (e.g., “Equip 2 Silver and 1 Gold Ability”), and you skip the World Phase and begin directly in an Instance. No data is recorded and the Index is not modified during or after the game.

Legacy Campaign

The Legacy Campaign is the definitive way to experience Legacy of Celestria. In this mode, your choices have weight, your injuries persist, and the world itself decays or flourishes based on your actions. You begin as humble wanderers with only Starter Abilities and basic Weapons, slowly building your 16-Card Pool as you retrieve higher-tier gear from your Hero Box through narrative rewards.

The campaign flows between the World Phase (traversing the Atlas, visiting Stores, and managing Events) and the Instance Phase (Combat and Puzzles). Progress is tracked in the Adventure Journal, where the Chronicler tracks your Hero’s growth, the current Corruption level of the world, and the Key Cards you’ve collected.

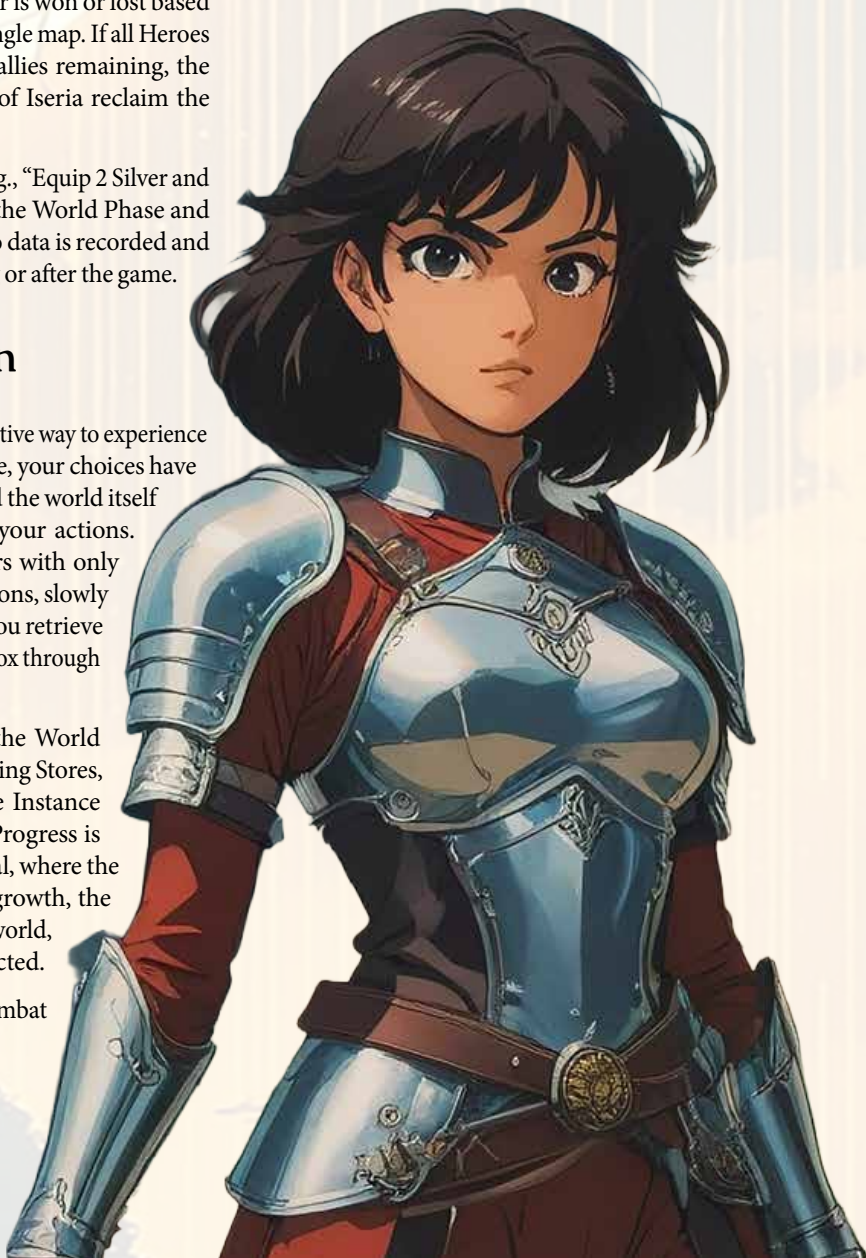

Unlike a One-Shot, a defeat in combat

doesn’t mean Game Over—it is a narrative setback. If the Party is defeated, they must retreat to the World Phase, often losing precious time, suffering later consequences, or watching as the Corruption wheel turns.

Hero Box: Your physical Save State. Between sessions, all active cards, armor, and markers are stored here for your Heroes.

Persistence: The Threat Wheel and Corruption levels are carried over from session to session. Game state is stored in the Indices.

Progression: You only unlock Bronze, Silver, Gold, and Platinum cards when the Event Booklet or Answer Card explicitly instructs you to  them.

Saving & Loading

Because Legacy of Celestria is a persistent experience, the state of the world—your Hero’s growth, the escalating Corruption, and the keys you have collected—must be preserved between sessions. Whether you have just completed a harrowing Instance or are pausing mid-travel on the Atlas, the Sanctuary Protocol ensures that no progress is lost. This process turns your physical game box into a living Save State of your campaign.

Saving

Each player possesses a dedicated box that acts as their Hero’s persistent memory.

Attributes: Remove your cubes and record the values in your Journal. Stack your Tableaus and put them back into the box.

Loadout: Place your Hero Card, along with your 8-card Active Loadout (Abilities, Armor, and Weapons), into the front sleeve of the box. Your remaining 16-card pool (the Bronze, Silver, and Gold cards you have  but are not currently using) should be tucked behind the loadout.

World: Because the Threat wheels can be bumped during storage, place clips on them and record their positions in the Journal. Record your location and position in the Journal. Deconstruct the maps and places decks from the table back into the index behind the appropriate Current and Active, and Drawn dividers.

Mid-Combat Save

Sometimes, real-world constraints require you to pause in the middle of an encounter. To perform, you must additionally record the current state of the the HP-Grids of any remaining Foes. We recommend taking a quick photo of the combat grid with your phone—this acts as a literal snapshot that makes reconstruction significantly faster.

Loading

When you return to the table, the loading process follows the reverse of the Sanctuary Protocol.

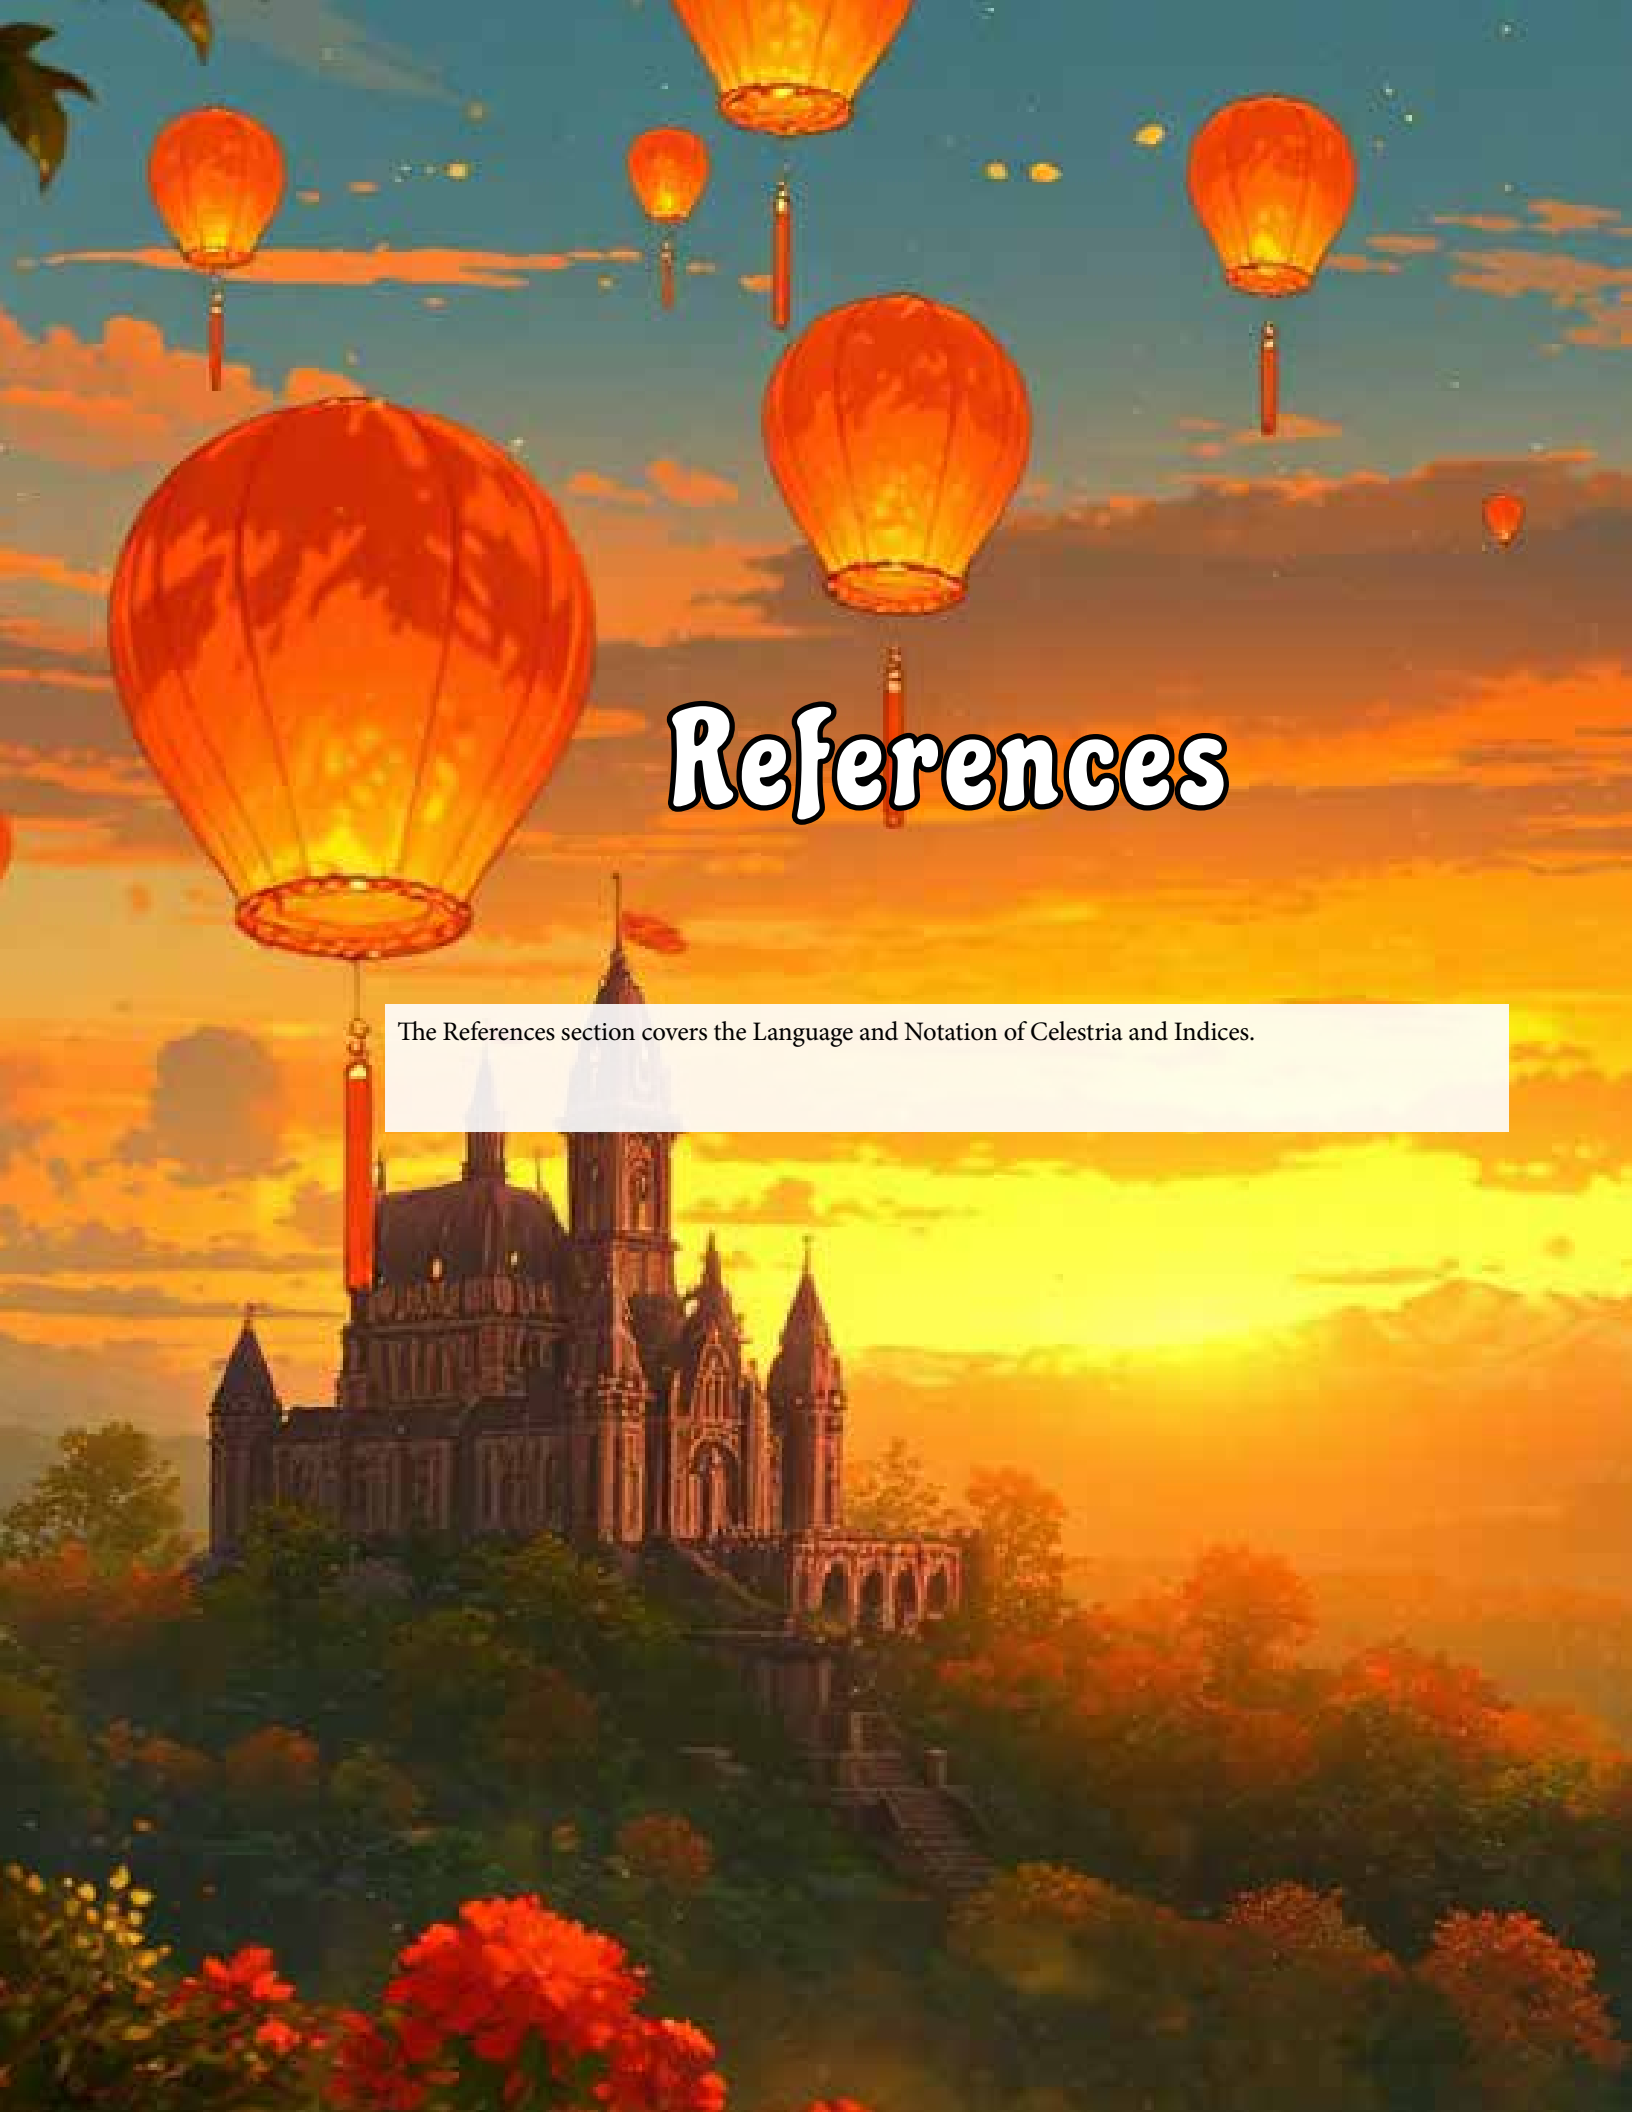

World: Remove the clips and set the Corruption and Threat wheels to the values recorded in the Journal. Pull decks from the Current, Active, and Drawn dividers.

Loadout: Players retrieve their Hero Boxes. Place your Hero Card and Active Loadout onto your Tableau.

Attributes: Move your Attribute Cubes and Valor Marker to match the numbers written in your Journal.

Atlas and Maps: The current Location, ACT, and other cards should be behind the Current divider. Reconstruct the maps. Place the party’s miniature on the Atlas or Instance where the previous session ended according to the Journal.

The References section covers the Language and Notation of Celestria and Indices.

The Language of Celestria

Celestria has many icons and ligatures baked into the text of the game materials. Learning to read these together with surrounding text is essential to understanding how to play.

Operations

Icon	Example	What to do
Retrieve	FOE-001	Retrieve the Foe card with the Id 001 from the index and place it in the play area.
Return	LOC-001	Return the Location card with the Id 002 from the play area to the Index.
Gain	ACT-007	Gain the Combat Action card, retrieving it from the index if necessary, and add it to the Combat Actions deck.
Lose	KEY-001	Lose the Key Item card, from the play area or a players hand, returning it to the index.
Draw	DAY-005	Draw a card from the Day deck and do what it says, placing it in the Day discard.
Discard	MOD-???	Discard the Modifier card with any index to the side of the play area. (It will soon be used again.)
→ To	NPC-001A → B	Change the state of the NPC card with index 001 from ‘A’ to ‘B’. Usually is paired with (exchange).
Exchange	NPC-001A → B	Exchange the NPC card with index 001 and state ‘A’ by returning it to the inactive section of the NPC index and replace it with card state ‘B’, placing it in the play area.
Banish	KEY-001A	Banish the Key card with Id 001 and state ‘A’ to the inactive section of the Key index.

✓ Yes or ✗ No	✓ Go; ✗ Stay	If yes, go to the choice “Go”; otherwise, “Stay”.

Abilities

Icon	Example	What to do
		Dice or Markers placed on this Ability are locked until the start of your next turn. (Used for duration abilities.)
		Required pattern node. To Activate the ability, all boxes in the pattern must have dice assigned.
		Ordered pattern node. To Activate the ability, at least one box must have dice assigned, in order from node-to-node.
		Piercing ordered pattern node. Nodes with blue box behind it have Pierce and can remove armor cubes.
		Starting pattern flow is the direction the pattern begins with. The example comes from the and goes left.
		Marker, such as glyph, hunters mark, enemy cube.
		Place a marker on this box. When used, place the marker elsewhere. When the marker refreshes, return it to this box.
		You may repeat the effect up to a limit specified by the enclosed constraint. Each time, you must complete the pattern first.
	Any value, like 4, blank, 2, or '+'. 	Any die, Might or Wisdom. Used in pattern nodes.
	Set, like 5, 5. 	Set of dice with the same value, Might or Wisdom. Used in pattern nodes.
	Run, like: 1, 2, 3. 	Run of dice with increasing value, Might or Wisdom. Used in pattern nodes.
	'+', '-', blank. 	Wisdom dice matching the value. Used in pattern nodes.

Components

Icon	Example	What to do
	goes first.	Heroes take their turn first.
	Rotate your to the right.	Rotate your Hero Tableau 90-degrees to the right.
	3 on NPC-101.	Place 3 of your marker cubes on NPC-101.
	All .	Remove all the Foes from the board.
	your at LOC-0010.	Place your hero at location, LOC-010, retrieving the LOC card and flipping to the page in the LOC booklet if necessary.
	a DAY card.	Draw a Day card and do what it says.
	to EVT-006.	Open the Event Book to event with Id 006 and do what it says.
	KEY-002 on the Atlas.	Place the Key Item card on the Atlas.
	Foes in the .	Place Foe Figures at the indicated spaces in the room.
	+1	Increase the Threat spinner by 1.

Icon	Example	What to do
	as seen on	The weapon requires 1 free hand to equip.
	as seen on	The weapon requires 2 free hands to equip.
	as seen on FAI.	The range used for the attack.
	2 as seen on ABL.	Pull the target unit 2 spaces toward the actor.
	as seen on FAI.	The Foe moves away from the Target.

Shattered Starlight

In the beginning, Celestia was a land defined by the rhythm of the stars and the steady pulse of the Great Viel. But as the Overlords rose, the light began to thin. From the frost-bitten north of the Beastfolk to the necrotic rot of the southern swamps, a shadow known as Corruption has begun to fold the map upon itself.

As the Guardians—spirits living in the liminality of the realm of mortals and the realm of the the Great Viel—are the only things standing between the world and the Void. One-by-one, these Guardians , once beautiful and grand, are twisting into shadowed perversions of what they represent, tainting the world and their domain around them. As the Corruption Wheel turns, reality itself is becoming unstable: time holds still in Western forests, dreams manifest outside peoples minds in the Eastern deserts, undead rise and spread across the southern swamps, and the Beastfolk have taken arms spreading warfare from the Northern mountains.

The world needs heroes. And as it happens, during one fateful night beneath a mysterious blood moon, the heroes join together. As a hero, you must travel the fading paths of the world, reclaim the lost light from the twisted, spiritual Guardians, and drive the darkness back from whence it came before the Overlords isolate the world from the rhythm of the stars and the pulse from the Great Viel.
